**MMA103 APPLIED MATHEMATICS FOR COMMUNICATION ENGINEERS****L T P C****3 1 0 4****OBJECTIVES:**

- To provide students the knowledge and understanding of advanced mathematical computation techniques with special emphasis on recent trends in communications.
- To be trained in expert usage of random variables
- To know more about various queuing models

**UNIT I SPECIAL FUNCTIONS 12**

Bessel's equation – Bessel function – Recurrence relations - Generating function and orthogonal property for Bessel functions of first kind – Fourier-Bessel expansion.

**UNIT II MATRIX THEORY 12**

Some important matrix factorizations – The Cholesky decomposition – QR factorization– Least squares method – Singular value decomposition - Toeplitz matrices.

**UNIT III ONE DIMENSIONAL RANDOM VARIABLES 12**

Random variables - Probability function – moments – moment generating functions and their properties – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions – Function of a Random Variable.

**UNIT IV TWO DIMENSIONAL RANDOM VARIABLES 12**

Joint distributions – Marginal and Conditional distributions – Functions of two dimensional random variables – Regression Curve for means – Correlation.

**UNIT V QUEUEING MODELS 12**

Poisson Process – Markovian queues – Single and Multi-server Models – Little's formula - Machine Interference Model – Steady State analysis – Self Service queue.

**MCC101 HIGH PERFORMANCE COMPUTER NETWORKS****L T P C  
3 0 0 3****OBJECTIVES:**

- To learn about multimedia networks and related services
- To brief about the VPN networks and advanced networking principles
- To discuss about network modeling and performance in networks
- To learn about the network security, security standards and network management

**UNIT I INTRODUCTION 9**

Review of OSI, TCP/IP; Multiplexing, Modes of Communication, Switching, Routing, SONET – DWDM – DSL – ISDN – BISDN, ATM.

**UNIT II MULTIMEDIA NETWORKING APPLICATIONS 9**

Streaming stored Audio and Video – Best effort service – protocols for real time interactive applications – Beyond best effort – scheduling and policing mechanism – integrated services – RSVP- differentiated services.

**UNIT II I ADVANCED NETWORKS CONCEPTS: 10**

VPN-Remote-Access VPN, site-to-site VPN, Tunneling to PPP, Security in VPN.MPLSoperation, Routing, Tunneling and use of FEC, Traffic Engineering, MPLS based VPN, overlay networks-P2P connections.

**UNIT IV TRAFFIC MODELLING: 7**

Little's theorem, Need for modeling, Poisson modeling and its failure, Non- poisson models, Network performance evaluation.

**UNIT V NETWORK SECURITY AND MANAGEMENT: 10**

Principles of cryptography – Authentication – integrity – key distribution and certification – Access control and: fire walls – attacks and counter measures – security in many layers. Infrastructure for network management – The internet standard management framework – SMI, MIB, SNMP, Security and administration – ASN.1

**MCC102      SYSTEM PROGRAMMING AND OPERATING SYSTEMS****L T P C  
3 0 0 3****OBJECTIVES:**

- To learn the fundamentals of Language processing
- To impart knowledge about Assemblers, Macros and Macro processors
- To learn the functionalities of Compilers and interpreters
- To study the functions of Operating System
- To discuss about CPU scheduling and Storage Management

**UNIT I****9**

Language processors: Introduction, Language processing Activities, Fundamentals of language Processing - Data Structures, Search data structures, Allocation data structures, scanning and parsing.

**UNIT II****9**

Assemblers: Elements of assembly language programming, simple assembly scheme, pass structure of Assemblers, Design of two pass Assemblers. Macros and Macro Processor: Macro definition and call, Macro expansion, nested Macro calls, Advanced Macro facilities, Design of a Macro preprocessor

**UNIT III****9**

Compilers and Interpreters: Aspects of Compilation, Memory allocation, Compilation of expressions, Compilation of control structures, Code optimization, Interpreters Linkers: Relocation and Linking concept, design of a Linker, Self Relocating Programs

**UNIT IV****9**

Introduction to OS: Types of OS, I/O Structure, Storage structure, Network Structure, System calls. Process Management: Process concept, Multithreading models, CPU Scheduling criteria, algorithms, Multiple processor Scheduling, Real Time Scheduling, Algorithm Evaluation, Critical Section problem, Synchronization hardware, Semaphores, Monitors, Classical Problems of Synchronization. Deadlock characterization, Prevention, Avoidance, Detection and Recovery.

**UNIT V****9**

Storage Management: Swapping, Memory Allocation – Contiguous and noncontiguous-Paging, Segmentation, Virtual Memory, demand paging, Page replacement, Allocation of frames, Thrashing, File concept, Access methods, File system structure. I/O Systems- I/O hardware, Disk - Structure, Scheduling, Disk Management and swap space management.

4. “Operating Systems” – William stallings- 2nd Edition PHI, 6th print.

**MCC131      COMPUTER AND COMMUNICATION LABORATORY I****L T P C**  
**0 0 4 2**

1. Simulation of Modulation and Coding in a AWGN Communication Channel using Simulation Packages.
2. Implementation of Linear and Cyclic Codes
3. Implementation of Adaptive Filters, periodogram and multistage multirate system in DSP Processor
4. Simulation of QMF using Simulation Packages.
5. Implementation of CPU scheduling algorithms.
6. Implementation of Lexical analyzer.
7. Implementation of Semaphores and monitors in classical problems of synchronization.
8. Usage of System Calls.

**MCE016 OPTICAL FIBER COMMUNICAITON AND NETWORKING L T P C**  
**3 0 0 3**

**OBJECTIVES:**

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures
- To learn the fiber optical receivers such as PIN APD diodes, noise performance in photo detector, receiver operation and configuration
- To learn the fiber optical network components, variety of networking aspects, FDDI, SONET/SDH and operational principles WDM

**UNIT I FIBER OPTIC WAVE GUIDES 9**

Light wave generation systems, system components, optical fibres, SI, GI, fibres, modes, Dispersion in fibres, limitations due to dispersion, Fiber loss, non linear effects. Dispersion shifted and Dispersion flattened fibres.

**UNIT II OPTICAL TRANSMITTERS, RECEIVERS AND AMPLIFIERS 9**

Basic concepts, LED's structure spectral distribution, semiconductor lasers, gain coefficients, modes, SLM and STM operation, Transmitter design, Receiver PIN and APD diodes design, noise sensitivity and degradation, Receiver amplifier design. Basic concepts of Semiconductor Optical amplifiers and EDFA operation.

**UNIT III LIGHT WAVE SYSTEM 9**

Coherent, homodyne and heterodyne keying formats, BER in synchronous – and asynchronous – receivers, Multichannel, WDM, multiple access networks, WDM components, TDM, Subcarrier and Code division multiplexing.

**UNIT IV DISPERSION COMPENSATION 9**

Limitations, Post- and Pre- compensation techniques, Equalizing filters, fiber based gratings, Broad band compensation, soliton communication system, fiber soliton, Soliton based communication system design, High capacity and WDM soliton system.

**UNIT V PRINCIPLES OF OPTICAL NETWORKS 9**

First and second generation optical networks: system network evaluation. SONET / SDH, MAN layered architecture broadcast and select networks MAC protocols, test beds, wavelength routing networks.

**MCC202****WIRELESS NETWORKS****L T P C**  
**3 0 0 3****OBJECTIVES:**

- To Study about Wireless transmission basics and Protocols
- To know about Wireless LAN and ATM
- To Understand the Mobile Application Architecture, Messaging and security

**UNIT I WIRELESS LOCAL AREA NETWORKS 9**

Introduction to wireless LANs - IEEE 802.11 WLANs - Physical Layer- MAC sublayer - MAC Management Sublayer- Wireless ATM - HIPERLAN- HIPERLAN-2, WiMax

**UNIT II 3G OVERVIEW & 2.5G EVOLUTION 9**

Migration path to UMTS, UMTS Basics, Air Interface, 3GPP Network Architecture, CDMA2000 overview- Radio and Network components, Network structure, Radio network, TD-CDMA, TD-SCDMA.

**UNIT II I ADHOC & SENSOR NETWORKS 9**

Characteristics of MANETs, Table-driven and Source-initiated On Demand routing protocols, Hybrid protocols, Wireless Sensor networks- Classification, MAC and Routing protocols.

**UNIT IV INTERWORKING BETWEEN WLANS AND 3G WWANS 9**

Interworking objectives and requirements, Schemes to connect WLANs and 3G Networks, Session Mobility, Interworking Architectures for WLAN and GPRS, System Description, Local Multipoint Distribution Service, Multichannel Multipoint Distribution system.

**UNIT V 4G & BEYOND 9**

4G features and challenges, Technology path, IMS Architecture, Convergent Devices, 4G technologies, Advanced Broadband Wireless Access and Services, Multimedia, MVNO.

**MCC203 INTERNET AND JAVA PROGRAMMING****L T P C  
3 0 0 3****OBJECTIVES :**

- To learn about Java , HTML, DHTML concepts
- To know about server side programming
- To impart knowledge of XML and its applications

**UNIT I INTRODUCTION 9**

Introduction to the Internet and World Wide Web - World Wide Web Consortium (W3C)  
 History of the Internet History of the World Wide Web - History of SGML –XML  
 Introduction to HyperText Markup Language - Editing HTML - Common Elements –  
 Headers - Linking - Images - Unordered Lists - Nested and Ordered Lists – HTML Tables-  
 Basic HTML Forms

**UNIT II DYNAMIC HTML 9**

Dynamic HTML Object Model and Collections, Event Model, Filters and Transitions, Data  
 Binding with Tabular Data Control, Dynamic HTML-Structured Graphics ActiveX  
 Controls, Dynamic HTML-Path, Sequencer and Sprite ActiveX Controls.

**UNIT III JAVASCRIPT 9**

JavaScript, Introduction to Scripting, Control Statements, Functions, Arrays, Objects.

**UNIT IV XML 9**

Creating Markup with XML -Parsers and Well-formed XML Documents -Parsing an XML  
 Document with msxml - Document Type Definition (DTD) - Document Type Declaration -  
 Element Type Declarations - Attribute Declarations - Document Object Model – DOM  
 Implementations - – DOM Components - path - XSL: Extensible Stylesheet Language  
 Transformations (XSLT)

**UNIT V PERL, CGI AND PHP 9**

Perl - String Processing and Regular Expressions - Form Processing and Business Logic -  
 Server-Side Includes - Verifying a Username and Password - Using DBI to Connect to a  
 Database -PHP - Form Processing and Business Logic --Connecting to a Database - Dynamic  
 Content in PHP

**MCC231            COMPUTER AND COMMUNICATION LABORATORY II****L T P C  
0 0 4 2**

1. DC characteristics of PIN PD and APD.
2. P-I characteristics of LED and LASER.
3. Optical link simulation using simulator packages.
4. Web design with HTML.
5. Web design with JAVA.
6. Simulation of ATM switches.
7. Simulation and Implementation of ATM congestion control algorithm.  
(Using free ATM network simulator software)

**MCC001****MICROWAVE CIRCUITS****L T P C  
3 0 0 3****OBJECTIVES:**

- To learn about impedance, matrix allocation and circuit matching principles.
- To discuss about filters and noise variations, distortions available in microwave circuits
- To learn the principles and designs implemented in amplifiers, oscillators and mixers with its applications

**UNIT I      CIRCUIT REPRESENTATION AND IMPEDANCE MATCHING      9**

Low Frequency Parameters- Impedance matrix, Admittance matrix, ABCD matrix. High Frequency Parameters-S MATRIX, Formulation, Signal Flow Graphs. Smith Chart (ZY), Selection of Matching, Networks, Design of Matching Networks using lumped and distributed elements, using Smith Chart, FOSTERS REACTANCE Theorem

**UNIT II      NOISE AND DISTORTION IN MICROWAVE CIRCUITS      9**

Review of Random Process - Thermal noise – available noise power and noise voltage – Auto correlation and Power spectral density in linear systems – Gaussian white noise – Mixing of noise – Narrow band representation of noise – probability of error for threshold detection – Noise Temperature, Noise factor and Noise figure, Equivalent noise temperature of non thermal sources. Noise temperature of cascaded networks. Noise figure of passive two port networks. Dynamic range and intermodulation distortion – Gain compression – third order intercept point. Intercept point of cascaded network.

**UNIT III      FILTERS      9**

Filter design by Insertion loss method, Butterworth and Tchebychef Low pass filters. Impedance and frequency scaling for low pass filters – Band pass and band stop transformation – Design examples – Filters using transmission line stubs – stepped impedance low pass filters – Band pass filters using transmission line resonators – capacitively coupled quarter wave resonators-Micro strip filters-Coupled resonator band pass filters

**UNIT IV      AMPLIFIERS      9**

FET and Bipolar Transistor models, two port power gain. Derivation of stability circles and stability criteria – unconditionally stable configuration and simultaneous conjugate matching – Amplifier design using S parameters – constant Noise figure circles – Design for maximum gain power amplifiers, LNA Design.

**UNIT V      OSCILLATORS AND MIXERS      9**

Oscillator using common emitter BJT and common Gate FET – Practical consideration- Voltage Controlled Oscillators , Negative Resistance Oscillators – Dielectric resonator Oscillators – Frequency synthesis methods – PLL Analysis, Oscillator Phase Noise. Mixer characteristics – Image Frequency - Conversion Loss – Noise figure – Intermediate Distortion – Single ended Diode Mixer – Balanced Mixer – Small signal Analysis – Image Reject Mixer.

**TOTAL PERIODS: 45**

**MCC002 NEURAL NETWORKS AND ITS APPLICATIONS****L T P C  
3 0 0 3****OBJECTIVES:**

- To learn about basic neural models and learning algorithms
- To gain knowledge about vector machines and basic function networks
- To learn about EM ALGORITHMS & non linear dynamical systems
- To learn about various neuron models

**UNIT I BASIC LEARNING ALGORITHMS 9**

Biological Neuron – Artificial Neural Model - Types of activation functions – Architecture: Feedforward and Feedback – Learning Process: Error Correction Learning –Memory Based Learning – Hebbian Learning – Competitive Learning- Boltzman Learning – Supervised and Unsupervised Learning – Learning Tasks: Pattern Space – Weight Space – Pattern Association – Pattern Recognition – Function Approximation – Control – Filtering - Beamforming – Memory – Adaptation - Statistical Learning Theory – Single Layer Perceptron – Perceptron Learning Algorithm – Perceptron Convergence Theorem – Least Mean Square Learning Algorithm – Multilayer Perceptron – Back Propagation Algorithm – XOR problem – Limitations of Back Propagation Algorithm.

**UNIT II RADIAL-BASIS FUNCTION NETWORKS AND SUPPORT VECTOR MACHINES: RADIAL BASIS FUNCTION NETWORKS: 9**

Cover's Theorem on the Separability of Patterns - Exact Interpolator – Regularization Theory – Generalized Radial Basis Function Networks - Learning in Radial Basis Function Networks - Applications: XOR Problem – Image Classification.  
Support Vector Machine:  
Optimal Hyperplane for Linearly Separable Patterns and Nonseparable Patterns – Support Vector Machine for Pattern Recognition – XOR Problem - -insensitive Loss Function – Support Vector Machines for Nonlinear Regression

**UNIT III COMMITTEE MACHINES: 9**

Ensemble Averaging - Boosting – Associative Gaussian Mixture Model – Hierarchical Mixture of Experts Model(HME) – Model Selection using a Standard Decision Tree – A Priori and Postpriori Probabilities – Maximum Likelihood Estimation – Learning Strategies for the HME Model - EM Algorithm – Applications of EM Algorithm to HME Model

**NEURODYNAMICS STEMS:**

Dynamical Systems – Attractors and Stability – Non-linear Dynamical Systems- Lyapunov Stability – Neurodynamical Systems – The Cohen-Grossberg

**UNIT IV ATTRACTOR NEURAL NETWORKS 9**

Associative Learning – Attractor Neural Network Associative Memory – Linear Associative Memory – Hopfield Network – Content Addressable Memory – Strange Attractors and Chaos- Error Performance of Hopfield Networks -Applications of Hopfield Networks – Simulated Annealing – Boltzmann Machine – Bidirectional Associative Memory – BAM Stability Analysis – Error Correction in BAMs -Memory Annihilation of Structured Maps in BAMS – Continuous BAMs – Adaptive BAMs – Applications

**ADAPTIVE RESONANCE THEORY:**

Noise-Saturation Dilemma - Solving Noise-Saturation Dilemma – Recurrent On-center – Off-surround Networks – Building Blocks of Adaptive Resonance – Substrate of Resonance Structural Details of Resonance Model – Adaptive Resonance Theory – Applications

**UNIT V SELF ORGANISING MAPS:****9**

Self-organizing Map – Maximal Eigenvector Filtering – Sanger’s Rule – Generalized Learning Law – Competitive Learning - Vector Quantization – Mexican Hat Networks - Self-organizing Feature Maps – Applications

**PULSED NEURON MODELS:**

Spiking Neuron Model – Integrate-and-Fire Neurons – Conductance Based Models – Computing with Spiking Neurons.

**MCC003 SOFTWARE ENGINEERING METHODOLOGIES****L T P C  
3 0 0 3****OBJECTIVES:**

- To understand Project planning and management
- To identify Client management and project definition
- To understand testing based approach to development
- To manage the Team and ongoing schedule tracking

**UNIT I****9**

Definition – systems approach – modeling the process and lifecycle – meaning of process – software process models – tools and techniques – practical process modeling – information systems – planning and managing the project – tracking project – project personnel – effort estimation – risk management – project plan – process models and project management

**UNIT II****9**

Capturing the requirements – requirements process – requirements elicitation – types – characteristics – modeling notations – specification languages – prototyping – documentation – validation and verification – measures – specification techniques – designing the system – decomposition and modularity – architectural styles and strategies – issues – characteristics – improvement techniques – design evaluation, validation – documentation

**UNIT III****8**

Considering objects – object orientation – OO development – use cases – representing OO – OO system design – program design – OO measurement – writing programs – standards – procedures – guidelines – documentation – programming process

**UNIT IV****9**

Testing the program – faults – failures – issues – unit testing – Integration testing – testing OO systems – test planning – automated testing tools - testing the system – principles – function testing – performance testing – reliability, availability and maintainability – acceptance testing – installation testing – automated system testing – test documentation – testing safety critical systems – delivering the system – training – documentation

**UNIT V****10**

System maintenance – the changing system – nature of maintenance – problems – measuring maintenance characteristics – techniques and tools – software rejuvenation – evaluation approaches – selection – assessment vs. prediction - evaluating products, processes and resources – improving predictions, products, processes and resources – guidelines – decision making in software engineering – licensing – certification and ethics

**MCC004****WIRELESS SENSOR NETWORKS****L T P C  
3 0 0 3****OBJECTIVES:**

- To discuss about the Adhoc networks and applications of sensor networks
- To implement the network architecture, operating systems and optimization goals.
- To study about the protocols and sensors for wireless networks
- To learn the topology control and platforms of sensor networks

**UNIT I OVERVIEW OF WIRELESS SENSOR NETWORKS 8**

Challenges for Wireless Sensor Networks-Characteristics requirements-required mechanisms, Difference between mobile Adhoc and sensor networks, Applications of sensor networks-Enabling Technologies for Wireless Sensor Networks.

**UNIT II ARCHITECTURES 9**

Single-Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes , Operating Systems and Execution Environments, Network Architecture - Sensor Network Scenarios, Optimization Goals and Figures of Merit, Gateway Concepts.

**UNIT III NETWORKING OF SENSORS 10**

Physical Layer and Transceiver Design Considerations, MAC Protocols for Wireless Sensor Networks, Low Duty Cycle Protocols And Wakeup Concepts - S-MAC , The Mediation Device Protocol, Wakeup Radio Concepts, Address and Name Management, Assignment of MAC Addresses, Routing Protocols- Energy-Efficient Routing, Geographic Routing.

**UNIT IV INFRASTRUCTURE ESTABLISHMENT 9**

Topology Control, Clustering, Time Synchronization, Localization and Positioning, Sensor Tasking and Control.

**UNIT V SENSOR NETWORK PLATFORMS AND TOOLS 9**

Operating Systems for Wireless Sensor Networks, Sensor Node Hardware – Berkeley Motes, Programming Challenges, Node-level software platforms, Node-level Simulators, State - centric programming.

**MCC005****OPERATING SYSTEM DESIGN****L T P C  
3 0 0 3****OBJECTIVES:**

- To study the system overview of operating system
- To study the process management and storage process
- To learn about the memory management and to manage the file allocation and future needs in operating system

**UNIT I OPERATING SYSTEMS OVERVIEW****9**

Operating system – Types of Computer Systems - Computer-system operation – I/O structure – Hardware Protection - System components – System calls – System programs – System structure - Process concept – Process scheduling – Operations on processes – Cooperating processes – Interprocess communication – Communication in client-server systems - Multithreading models – Threading issues – Pthreads.

**UNIT II PROCESS MANAGEMENT****10**

Scheduling criteria – Scheduling algorithms – Multiple-processor scheduling – Real time scheduling – Algorithm Evaluation – Process Scheduling Models - The critical-section problem – Synchronization hardware – Semaphores – Classic problems of synchronization – critical regions – Monitors - System model – Deadlock characterization – Methods for handling deadlocks – Recovery from deadlock

**UNIT III STORAGE MANAGEMENT****9**

Memory Management – Swapping – Contiguous memory allocation – Paging – Segmentation – Segmentation with paging. Virtual Memory: Background – Demand paging – Process creation – Page replacement – Allocation of frames – Thrashing.

**UNIT IV I/O SYSTEMS****9**

File concept – Access methods – Directory structure – File-system mounting – Protection - Directory implementation – Allocation methods – Free-space management - Disk scheduling – Disk management – Swap-space management.

**UNIT V CASE STUDY****8**

The Linux System - History – Design Principles – Kernel Modules – Process Management – Scheduling – Memory management – File systems – Input and Output –Inter-process Communication – Network Structure – Security – Windows 2000 – History – Design Principles – System Components – Environmental subsystems – File system – Networking.

**MCC006****VISUAL PROGRAMMING****L T P C****3 0 0 3****OBJECTIVES:**

- To learn the basics of Windows Programming
- To study the Visual Basic, Visual C++ programming
- To learn about the basic controls, Active X documents and Socket programming
- To discuss the advanced concepts of visual database

**UNIT I WINDOWS PROGRAMMING****8**

The windows programming Model – Event driven programming – GUI concepts – Overview of Windows programming – Creating and displaying the window – Message Loop – windows procedure – WM\_PAINT message – WM\_DESTROY message – Data types – Resources – An Introduction to GDI – Device context – Text output – Scroll Bars – Keyboard – Mouse – Menus.

**UNIT II VISUAL BASIC PROGRAMMING****10**

Visual Basic Applications – Form and properties – Variables and Constants – Variant type – Procedure scope – Main – Control statements – control arrays – Creating and using Controls – Menus and Dialogs – Programming fundamentals – Objects and instances – Debugging – Responding to mouse events – Drag and Drag drop events Responding to keyboard events – keypress, keyup, keydown events – Using grid control – Graphics controls – shape and line control – File system controls – Common dialog controls – Processing files – Accessing databases with the data controls.

**UNIT III VISUAL C++ PROGRAMMING****9**

Visual C++ components – Introduction to Microsoft Foundation Classes Library – Getting started with AppWizard – Class Wizard – Event handling – Keyboard and Mouse events - WM\_SIZE, WM\_CHAR messages - Graphics Device Interface - Pen, Brush, Colors, Fonts - Single and Multiple document interface - Reading and Writing documents - Resources – Bitmaps creation, usage of BMP and displaying a file existing as a BMP.

**UNIT IV CONTROLS****9**

Dialog Based Applications, controls – Animate control, image list, CRect tracker – Tree control – CtabControl – Dynamic controls – slider control – progress control – Inheriting CTreeView – CRicheditView – Modal Dialog, – Modeless Dialog – CColorDialog – CFileDialog.

**UNIT V ADVANCED CONCEPTS****9**

Domain Name System – Email – World Wide Web (HTTP) – Simple Status bars – Splitter windows and multiple views – Dynamic Link Library – Data base Management with ODBC – TCP/IP – Winsock and WinInet, – ActiveX control – creation and usage – Container class.

**TOTAL PERIODS: 45**

**MCC007****ADHOC NETWORKS****L T P C**  
**3 0 0 3****OBJECTIVES:**

- To learn about the MAC address spoofing concepts and basics of networks
- To learn about the routing principles and Adhoc network types.
- To learn about the IEEE standards, MESH networks and its heterogeneous models

**UNIT I ADHOC MAC****9**

Introduction – Issues in Adhoc Wireless Networks. MAC Protocols – Issues, Classifications of MAC protocols, Multi channel MAC & Power control MAC protocol.

**UNIT II ADHOC NETWORK ROUTING & TCP****9**

Issues – Classifications of routing protocols – Hierarchical and Power aware. Multicast routing – Classifications, Tree based, Mesh based. Adhoc Transport Layer Issues. TCP Over Adhoc – Feedback based, TCP with explicit link, TCP-BuS, Adhoc TCP, and Split TCP.

**UNIT III WSN –MAC****9**

Introduction – Sensor Network Architecture, Data dissemination, Gathering. MAC Protocols – self-organizing, Hybrid TDMA/FDMA and CSMA based MAC.

**UNIT IV WSN ROUTING, LOCALIZATION & QOS****9**

Issues in WSN routing – OLSR, AODV. Localization – Indoor and Sensor Network Localization. QoS in WSN.

**UNIT V MESH NETWORKS****9**

Necessity for Mesh Networks – MAC enhancements – IEEE 802.11s Architecture – Opportunistic routing – Self configuration and Auto configuration – Capacity Models – Fairness – Heterogeneous Mesh Networks – Vehicular Mesh Networks.

**MCC008****OBJECT ORIENTED SYSTEM DESIGN****L T P C****3 0 0 3****OBJECTIVES:**

- To learn about the object oriented system concepts
- To learn and discuss about the UML tools and mapping functions
- To learn about packages and design patterns

**UNIT I****10**

Introduction to System Concepts - Managing Complex Software — Properties – Object Oriented Systems Development – Object Basics – Systems Development Life Cycle - Rumbaugh Methodology - Booch Methodology - Jacobson Methodology – Unified Process

**UNIT II****8**

Unified Approach – Unified Modeling Language – Static behavior diagrams – Dynamic behavior diagrams – Object Constraint Language

**UNIT III****9**

Inception – Evolutionary Requirements – Domain Models – Operation Contracts - Requirements to Design – Design Axioms – Logical Architecture - Designing Objects with Responsibilities – Object Design – Designing for Visibility

**UNIT IV****9**

Patterns – Analysis and Design patterns – GoF Patterns - Mapping designs to code – Test Driven development and refactoring – UML Tools and UML as blueprint

**UNIT V****9**

More Patterns – Applying design patterns – Architectural Analysis – Logical Architecture Refinement – Package Design – Persistence framework with patterns

**TOTAL PERIODS: 45****REFERENCES:**

**MCC009****CLOUD COMPUTING****L T P C****3 0 0 3****OBJECTIVES:**

- To Understand the fundamentals of cloud computing
- To study about the web based applications in cloud
- To know about the use of cloud computing

**UNIT I UNDERSTANDING CLOUD COMPUTING****6**

Cloud Computing – History of Cloud Computing – Cloud Architecture – Cloud Storage – Why Cloud Computing Matters – Advantages of Cloud Computing – Disadvantages of Cloud Computing – Companies in the Cloud Today – Cloud Services

**UNIT II DEVELOPING CLOUD SERVICES****10**

Web-Based Application – Pros and Cons of Cloud Service Development – Types of Cloud Service Development – Software as a Service – Platform as a Service – Web Services – On-Demand Computing – Discovering Cloud Services Development Services and Tools – Amazon Ec2 – Google App Engine – IBM Clouds

**UNIT III CLOUD COMPUTING FOR EVERYONE****10**

Centralizing Email Communications – Collaborating on Schedules – Collaborating on To-Do Lists – Collaborating Contact Lists – Cloud Computing for the Community – Collaborating on Group Projects and Events – Cloud Computing for the Corporation

**UNIT IV USING CLOUD SERVICES****10**

Collaborating on Calendars, Schedules and Task Management – Exploring Online Scheduling Applications – Exploring Online Planning and Task Management – Collaborating on Event Management – Collaborating on Contact Management – Collaborating on Project Management – Collaborating on Word Processing - Collaborating on Databases – Storing and Sharing Files

**UNIT V OTHER WAYS TO COLLABORATE ONLINE****9**

Collaborating via Web-Based Communication Tools – Evaluating Web Mail Services – Evaluating Web Conference Tools – Collaborating via Social Networks and Groupware – Collaborating via Blogs and Wikis

**Total=45****REFERENCES**

**MCC010 DATA MINING ALGORITHMS, ANALYSIS AND PARALLELIZATION**

**L T P C**  
**3 0 0 3**

**OBJECTIVES:**

- To understand the basics and various techniques of data mining.
- To know about mining of various types of data.
- To know about how to parallelize data mining algorithms.

**UNIT I MINING FREQUENT PATTERNS, ASSOCIATIONS AND CORRELATIONS 9**

Introduction to data mining algorithms, Basic Concepts and a Road Map, Efficient and Scalable Frequent Itemset Mining Methods, Mining Various Kinds of Association Rules, From Association Mining to Correlation Analysis, Constraint Based Association Mining.

**UNIT II CLASSIFICATION AND PREDICTION 9**

Classification & Prediction – Definitions, Issues Regarding Classification & Prediction, Classification by Decision Tree Induction, Bayesian Classification, Rule Based Classification, Classification by Backpropagation, Support Vector Machines, Classification by Association Rule Analysis, Lazy Learners, Genetic Algorithms, Rough Set & Fuzzy Set Approaches, Prediction Techniques, Evaluating the Accuracy of a Classifier or Predictor.

**UNIT III CLUSTER ANALYSIS 9**

Cluster Analysis, Types of Data in Cluster Analysis, Partitioning Methods, Hierarchical Methods, Density Based Methods, Grid Based Methods, Model Based Clustering Methods, Clustering High Dimensional Data, Constraint Based Cluster Analysis, Outlier Analysis.

**UNIT IV MINING STREAM, TIME-SERIES AND SEQUENCE DATA 9**

Mining Data Streams, Mining Time-Series Data, Mining Sequence Patterns in Transactional Databases, Mining Sequence Patterns in Biological Data, Graph Mining: Methods for Mining Frequent Subgraphs, Mining Variant and Constrained Substructure Patterns, and Applications.

**UNIT V PARALLELIZATION OF DATA MINING ALGORITHMS 9**

Parallelization of Association Rule Mining: Eclat, Maxclat, Clique, Maxclique, MLFPT. Parallel K Means Clustering, Parallel Hierarchical Clustering, Parallel Formulations of decision tree algorithms.

**TOTAL: 45 PERIODS**

**MCE001****COMMUNICATION NETWORK SECURITY****L T P C****3 0 0 3****OBJECTIVES:**

- To learn about basic security issues
- Description of modeling issues and mathematical analysis using various encryption schemes
- To discuss the basic fire walls and layer security issues

**UNIT I INTRODUCTION ON SECURITY****9**

Security Goals, Types of Attacks: Passive attack, active attack, attacks on confidentiality, attacks on Integrity and availability. Security services and mechanisms, Techniques Cryptography, Steganography , Revision on Mathematics for Cryptography.

**UNIT II SYMMETRIC & ASYMMETRIC KEY ALGORITHMS****9**

Substitutional Ciphers, Transposition Ciphers, Stream and Block Ciphers, Data Encryption Standards (DES), Advanced Encryption Standard (AES), RC4, principle of asymmetric key algorithms, RSA Cryptosystem

**UNIT III INTEGRITY, AUTHENTICATION AND KEY MANAGEMENT****9**

Message Integrity, Hash functions: SHA, Digital signatures: Digital signature standards. Authentication: Entity Authentication: Biometrics, Key management Techniques.

**UNIT IV NETWORK SECURITY, FIREWALLS AND WEB SECURITY****9**

Introduction on Firewalls, Types of Firewalls, Firewall Configuration and Limitation of Firewall. IP Security Overview, IP security Architecture, authentication Header, Security payload, security associations, Key Management. Web security requirement, secure sockets layer, transport layer security, secure electronic transaction, dual signature

**UNIT V WIRELESS NETWORK SECURITY****9**

Security Attack issues specific to Wireless systems: Worm hole, Tunneling, DoS. WEP for Wi-Fi network, Security for 4G networks: Secure Adhoc Network, Secure Sensor Network

**MCE004                      DIGITAL SPEECH SIGNAL PROCESSING                      L T P C**  
**3 0 0 3**

**OBJECTIVES:**

- To learn about speech mechanism
- To learn time domain and frequency domain methodologies for speech processing
- To learn about linear predictive analysis and applications of speech signal processing

**UNIT I                      MECHANICS OF SPEECH                      8**

Speech production mechanism – Nature of Speech signal – Discrete time modelling of Speech production – Representation of Speech signals – Classification of Speech sounds – Phones – Phonemes – Phonetic and Phonemic alphabets – Articulatory features. Music production – Auditory perception – Anatomical pathways from the ear to the perception of sound – Peripheral auditory system – Psycho acoustics

**UNIT II                      TIME DOMAIN METHODS FOR SPEECH PROCESSING                      8**

Time domain parameters of Speech signal – Methods for extracting the parameters Energy, Average Magnitude – Zero crossing Rate – Silence Discrimination using ZCR and energy – Short Time Auto Correlation Function – Pitch period estimation using Auto Correlation Function

**UNIT III                      FREQUENCY DOMAIN METHOD FOR SPEECH PROCESSING                      9**

Short Time Fourier analysis – Filter bank analysis – Formant extraction – Pitch Extraction Analysis by Synthesis- Analysis synthesis systems- Phase vocoder – Channel Vocoder.

**HOMOMORPHIC SPEECH ANALYSIS:**

Cepstral analysis of Speech – Formant and Pitch Estimation – Homomorphic Vocoders.

**UNIT IV                      LINEAR PREDICTIVE ANALYSIS OF SPEECH                      10**

Formulation of Linear Prediction problem in Time Domain – Basic Principle – Auto correlation method – Covariance method – Solution of LPC equations – Cholesky method – Durbin’s Recursive algorithm – lattice formation and solutions – Comparison of different methods – Application of LPC parameters – Pitch detection using LPC parameters – Formant analysis – VELP – CELP.

**UNIT V                      APPLICATION OF SPEECH SIGNAL PROCESSING                      10**

Algorithms: Spectral Estimation, dynamic time warping, hidden Markov model – Music analysis – Pitch Detection – Feature analysis for recognition – Automatic Speech Recognition – Feature Extraction for ASR – Deterministic sequence recognition – Statistical Sequence recognition – ASR systems – Speaker identification and verification – Voice response system – Speech Synthesis: Text to speech, voice over IP.

**MCE011 HIGH SPEED SWITCHING ARCHITECTURES****L T P C  
3 0 0 3****OBJECTIVE:**

- To understand the types of switch fabrics for high speed applications
- To get a clear idea about the traffic and Queuing systems
- To illustrate packet switching and IP switching techniques

**UNIT I LAN SWITCHING TECHNOLOGY 9**

Switching Concepts, switch forwarding techniques, switch path control, LAN Switching, cut through forwarding, store and forward, virtual LANs.

**UNIT II ATM SWITCHING ARCHITECTURE 9**

Blocking networks - basic - and- enhanced banyan networks, sorting networks – merge sorting, rearrangeable networks - full-and- partial connection networks, non blocking networks - Recursive network construction, comparison of non-blocking network, Switching with deflection routing - shuffle switch, tandem banyan switch.

**UNIT III QUEUES IN ATM SWITCHES 9**

Internal Queueing -Input, output and shared queueing, multiple queueing networks – combined Input, output and shared queueing - performance analysis of Queued switches.

**UNIT IV PACKET SWITCHING ARCHITECTURES 9**

Architectures of Internet Switches and Routers- Bufferless and buffered Crossbar switches, Multi-stage switching, Optical Packet switching; switching fabric on a chip; internally buffered Crossbars.

**UNIT V IP SWITCHING 9**

Addressing model, IP Switching types - flow driven and topology driven solutions, IP Over ATM address and next hop resolution, multicasting, Ipv6 over ATM.

**MCE014****ASIC DESIGN****L T P C**  
**3 0 0 3****OBJECTIVES:**

- To present an overview of FPGAs and ASICs that are suitable for tasks which cannot be executed efficiently by a general-purpose microprocessor
- To learn about Xilinx design software and low level designs
- To provide an in-depth idea using FPGAs that will involve architectural tradeoffs and simulation.
- To reinforce the hands on experience using computer-aided design tools (ASIC constructions, floor planning and placement).

**UNIT I INTRODUCTION TO ASICS, CMOS LOGIC AND ASIC LIBRARY DESIGN 9**

Types of ASICs - Design flow - CMOS transistors CMOS Design rules - Combinational Logic Cell – Sequential logic cell - Data path logic cell - Transistors as Resistors – Transistor Parasitic Capacitance- Logical effort –Library cell design - Library architecture.

**UNIT II PROGRAMMABLE ASICS, PROGRAMMABLE ASIC LOGIC CELLS AND PROGRAMMABLE ASIC I/O CELLS 9**

Anti fuse - static RAM - EPROM and EEPROM technology - PREP benchmarks - Actel - Xilinx LCA –Altera FLEX - Altera MAX DC & AC inputs and outputs - Clock & Power inputs - Xilinx I/O blocks.

**UNIT III PROGRAMMABLE ASIC INTERCONNECT, PROGRAMMABLE ASIC DESIGN SOFTWARE AND LOW LEVEL DESIGN ENTRY 9**

Actel ACT -Xilinx LCA - Xilinx EPLD - Altera MAX 5000 and 7000 - Altera MAX 9000 - Altera FLEX –Design systems - Logic Synthesis - Half gate ASIC -Schematic entry - Low level design language - PLA tools -EDIF- CFI design representation.

**UNIT IV LOGIC SYNTHESIS, SIMULATION AND TESTING 9**

Verilog and logic synthesis -VHDL and logic synthesis - types of simulation -boundary scan test - fault simulation - automatic test pattern generation.

**UNIT V ASIC CONSTRUCTION, FLOOR PLANNING, PLACEMENT AND ROUTING 9**

System partition - FPGA partitioning - partitioning methods - floor planning - placement - physical design flow –global routing - detailed routing - special routing - circuit extraction - DRC.

**TOTAL PERIODS: 45**

**MCE015****NON LINEAR FIBER OPTICS****L T P C****3 0 0 3****OBJECTIVES:**

- To introduce the fundamentals of nonlinear optics and applications in integrated devices
- To present the dispersion techniques and modulation techniques in optical networks
- To introduce and teach the optical solutions used in modern optical systems
- To broaden the perception of the role of optical engineering and applications

**UNIT I FIBER NONLINEARITIES 9**

Introduction - Nonlinear Refraction - Maxwell's Equations - Fiber Modes - Eigen value Equations - Single Mode Condition - Nonlinear pulse Propagation - Higher Order Nonlinear Effects.

**UNIT II GROUP VELOCITY DISPERSION AND PHASE MODULATION 10**

Gaussian Pulse - Chirped Gaussian Pulse - Higher Order Dispersions - Changes in Pulse Shape – Self Phase Modulation (SPM) induced Spectral Broadening - Non-linear Phase Shift - Effect of Group Velocity Dispersion - Self Steepening - Application of SPM Cross Phase Modulation (XPM) - Coupling between Waves of Different Frequencies - Non-linear Birefringence - Optical Kerr Effect - Pulse Shaping.

**UNIT III OPTICAL SOLITONS AND DISPERSION MANAGEMENT 9**

Soliton Characteristics - Soliton Stability - Dark Solitons – Other kinds of Solitons – Effect of Birefringence in Solitons - Solitons based Fiber Optic Communication System (Qualitative treatment) – Demerits - Dispersion Managed Solitons (DMS).

**UNIT IV SOLITON LASERS 8**

Non-linear Fiber Loop Mirrors - Soliton Lasers - Fiber Raman Lasers - Fiber Raman Amplifiers - Fiber Raman Solitons - Erbium doped fiber amplifiers.

**UNIT V APPLICATIONS OF SOLITONS 9**

DMS for single channel transmission – WDM transmission - Fiber Gratings- Fiber Couplers – Fiber Interferometers – Pulse Compression – Soliton Switching – Soliton light wave systems.

**MCE201****WIRELESS MOBILE COMMUNICATION****L T P C**  
**3 0 0 3****OBJECTIVES:**

- To learn the basic of wireless channel and channel capacity models
- To discuss the performance of wireless channels and diversity techniques
- To study the multiple access capabilities of spread spectrum and multicarrier modulation techniques
- To learn the spread spectrum technologies.

**UNIT I THE WIRELESS CHANNEL****9**

Overview of wireless systems – Physical modeling for wireless channels – Time and Frequency coherence – Statistical channel models – Capacity of wireless Channel- Capacity of Flat Fading Channel — Channel Distribution Information known – Channel Side Information at Receiver – Channel Side Information at Transmitter and Receiver – Capacity with Receiver diversity – Capacity comparisons – Capacity of Frequency Selective Fading channels

**UNIT II PERFORMANCE OF DIGITAL MODULATION OVER WIRELESS CHANNELS****8**

Fading– Outage Probability– Average Probability of Error — Combined Outage and Average Error Probability – Doppler Spread – Intersymbol Interference.

**UNIT III DIVERSITY****9**

Realization of Independent Fading Paths – Receiver Diversity – Selection Combining – Threshold Combining – Maximal-Ratio Combining – Equal - Gain Combining – Transmitter Diversity – Channel known at Transmitter – Channel unknown at Transmitter – The Alamouti Scheme.

**UNIT IV MULTICARRIER MODULATION****10**

Data Transmission using Multiple Carriers – Multicarrier Modulation with Overlapping Subchannels – Mitigation of Subcarrier Fading – Discrete Implementation of Multicarrier Modulation – Peak to average Power Ratio- Frequency and Timing offset – Case study IEEE 802.11a.

**UNIT V SPREAD SPECTRUM****9**

Spread Spectrum Principles – Direct Sequence Spread Spectrum – Spreading Code Synchronization- RAKE receivers- Frequency Hopping Spread Spectrum – Multiuser DSSS Systems – Multiuser FHSS Systems.

**MCS001****XML AND WEB SERVICES****L T P C  
3 0 0 3****OBJECTIVES:**

- To introduce the XML technology
- To study and understand the web services technology
- To implement XML in E-business
- To know how to secure web services

**UNIT I XML TECHNOLOGY FAMILY****9**

XML – Benefits – Advantages of XML over HTML – EDI – Databases – XML Based standards– Structuring with schemas – DTD – XML schemas – XML processing – DOM – SAX–Presentation technologies – XSL – XFORMS – XHTML – Transformation – XSLT– XLINK–XPath–Xquery

**UNITII ARCHITECTING WEB SERVICES****9**

Business motivations for web services – B2B – B2C – Technical motivations – Limitations of CORBA and DCOM – Service Oriented Architecture (SOA) – Architecting web services – Implementation view– Web services technology stack – Logical view–Composition of web services–Deployment view From application server to peer to peer–Process view–Life in the runtime.

**UNITIII WEB SERVICES BUILDING BLOCKS****9**

Transport protocols for web services – Messaging with web services – Protocols – SOAP – Describing web services – WSDL – Anatomy of WSDL – Manipulating WSDL – Web service policy–Discovering web services – UDDI – Anatomy of UDDI – Web service inspection– Adhoc discovery–Securing web services.

**UNITIV IMPLEMENTING XML IN E–BUSINESS****9**

B2B – B2C applications – Different types of B2B interaction – Components of E –Business XML systems – EBXML – RosettaNet – Applied XML in vertical industry – Web services for mobile devices.

**UNITV XML CONTENT MANAGEMENT AND SECURITY****9**

Semantic web – Role of meta data in web content – Resource description framework – RDFSchema–Architecture of semantic web – Content management workflow – XLANG – WSFL–Securing web services.

**TOTAL PERIODS: 45****TEXT BOOKS**

**MCS002****DISTRIBUTED COMPUTING****L T P C  
3 0 0 3****OBJECTIVES:**

- To introduce the various paradigms in distributed environment
- To know about distributed operating systems
- To study the file systems.
- To understand the concepts of fault tolerance system.

**UNIT I COMMUNICATION IN DISTRIBUTED ENVIRONMENT 8**

Introduction – Various Paradigms in Distributed Applications – Remote Procedure Call – Remote Object Invocation – Message-Oriented Communication – Unicasting, Multicasting and Broadcasting – Group Communication.

**UNIT II DISTRIBUTED OPERATING SYSTEMS 12**

Issues in Distributed Operating System – Threads in Distributed Systems – Clock Synchronization – Causal Ordering – Global States – Election Algorithms – Distributed Mutual Exclusion – Distributed Transactions – Distributed Deadlock – Agreement Protocols .

**UNIT III DISTRIBUTED RESOURCE MANAGEMENT 10**

Distributed Shared Memory – Data-Centric Consistency Models – Client-Centric Consistency Models – Ivy – Munin – Distributed Scheduling – Distributed File Systems – Sun NFS.

**UNIT IV FAULT TOLERANCE AND CONSENSUS 7**

Introduction to Fault Tolerance – Distributed Commit Protocols – Byzantine Fault Tolerance – Impossibilities in Fault Tolerance.

**UNIT V CASE STUDIES 8**

Distributed Object-Based System – CORBA – COM+ – Distributed Coordination-Based System – JINI.

**TOTAL PERIODS: 45****REFERENCES:**

**MCS006****SOFT COMPUTING****L T P C  
3 0 0 3****OBJECTIVES:**

- To introduce soft computing constituents
- To study the applications of Genetic algorithms
- To study the different classifications of neural networks
- To understand the fuzzy logic

**UNIT I INTRODUCTION TO SOFT COMPUTING AND NEURAL NETWORKS 9**

Evolution of Computing - Soft Computing Constituents – From Conventional AI to Computational Intelligence - Machine Learning Basics

**UNIT II GENETIC ALGORITHMS 9**

Introduction to Genetic Algorithms (GA) – Applications of GA in Machine Learning – Machine Learning Approach to Knowledge Acquisition.

**UNIT III NEURAL NETWORKS 9**

Machine Learning Using Neural Network, Adaptive Networks – Feed forward Networks – Supervised Learning Neural Networks – Radial Basis Function Networks – Reinforcement Learning – Unsupervised Learning Neural Networks – Adaptive Resonance architectures – Advances in Neural networks.

**UNIT IV FUZZY LOGIC 9**

Fuzzy Sets – Operations on Fuzzy Sets – Fuzzy Relations – Membership Functions- Fuzzy Rules and Fuzzy Reasoning – Fuzzy Inference Systems – Fuzzy Expert Systems – Fuzzy Decision Making.

**UNIT V NEURO-FUZZY MODELING 9**

Adaptive Neuro-Fuzzy Inference Systems – Coactive Neuro-Fuzzy Modeling – Classification and Regression Trees – Data Clustering Algorithms – Rulebase Structure Identification – Neuro-Fuzzy Control – Case studies.

**TOTAL PERIODS: 45****TEXT BOOKS:**

**MCS007****MOBILE COMPUTING****L T P C****3 0 0 3****OBJECTIVES:**

- To know the fundamentals of wireless communication
- To understand the telecommunication systems
- To study the different network layers
- To study about various protocols

**UNIT I WIRELESS COMMUNICATION FUNDAMENTALS 9**

Introduction – Wireless transmission – Frequencies for radio transmission – Signals – Antennas – Signal Propagation – Multiplexing – Modulations – Spread spectrum – MAC – SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks.

**UNIT II TELECOMMUNICATION SYSTEMS 11**

GSM – System Architecture – Protocols – Connection Establishment – Frequency Allocation – Routing – Handover – Security – GPRS.

**UNIT III WIRELESS NETWORKS 9**

Wireless LAN – IEEE 802.11 Standards – Architecture – Services – HIPERLAN – Adhoc Network – Blue Tooth.

**UNIT IV NETWORK LAYER 9**

Mobile IP – Dynamic Host Configuration Protocol – Routing – DSDV – DSR – AODV – ZRP – ODMR.

**UNIT V TRANSPORT AND APPLICATION LAYERS 7**

TCP over Wireless Networks – Indirect TCP – Snooping TCP – Mobile TCP – Fast Retransmit / Fast Recovery – Transmission/Timeout Freezing – Selective Retransmission – Transaction Oriented TCP – WAP – WAP Architecture – WDP – WTLS – WTP – WSP – WML – WML Script – WAE – WTA.

**MCS011 SOFTWARE PROJECT MANAGEMENT****L T P C  
3 0 0 3****OBJECTIVES:**

- To study the product development life cycle
- To understand the emerging models relevance to project management
- To know the engineering and people issues in project management

**UNIT I BASIC CONCEPTS 9**

Product, Process and Project – Definition – Product Life Cycle – Project Life Cycle Models.

**UNIT II FORMAT PROCESS MODELS AND THEIR USE 9**

Definition and Format model for a process – The ISO 9001 and CMM Models and their relevance to Project Management – Other Emerging Models like People CMM.

**UNIT III UMBRELLA ACTIVITIES IN PROJECTS 9**

Metrics – Configuration Management – Software Quality Assurance – Risk Analysis.

**UNIT IV IN STREAM ACTIVITIES IN PROJECTS 9**

Project Initiation – Project Planning – Execution and Tracking – Project Wind up – Concept of Process/Project Database.

**UNIT V ENGINEERING AND PEOPLE ISSUES IN PROJECT MANAGEMENT 9**

Phases (Requirements, Design, Development, Testing, Maintenance, Deployment) – Engineering Activities and Management Issues in Each Phase – Special Considerations in Project Management for India and Geographical Distribution Issues.

**MCS012****GRID COMPUTING****L T P C**  
**3 0 0 3****OBJECTIVES:**

1. To introduce the grid computing
2. To study the technologies and tool kit for grid computing
3. To know the high level grid services

**UNIT I INTRODUCTION TO GRID COMPUTING 7**

Introduction – The Grid – Past, Present and Future – Applications of grid computing organizations and their roles.

**UNIT II GRID COMPUTING ARCHITECTURE 8**

Grid Computing anatomy – Next generation of Grid computing initiatives–Merging the Grid services architecture with Web services architecture.

**UNIT III GRID COMPUTING TECHNOLOGIES 11**

OGSA – Sample use cases that drive the OGSA platform components – OGSI and WSRF – OGSA Basic Services – Security standards for grid computing.

**UNIT IV GRID COMPUTING TOOL KIT 10**

Globus Toolkit –Versions – Architecture –GT Programming model –A sample grid service implementation.

**UNIT V HIGH LEVEL GRID SERVICES 9**

High level grid services – OGSI .NET middleware Solution Mobile OGSI.NET for Grid computing on Mobile devices.

**TOTAL PERIODS: 45****REFERENCES:**

**MCS016****PERVASIVE COMPUTING****L T P C**  
**3 0 0 3****OBJECTIVES:**

1. To introduce the pervasive computing devices and interfaces
2. To know the voice standards and speech applications
3. To know the issues in pervasive computing

**UNIT I****9**

Pervasive Computing Application - Pervasive Computing devices and Interfaces - Device technology trends, Connecting issues and protocols

**UNIT II****9**

Pervasive Computing and web based Applications - XML and its role in Pervasive Computing - Wireless Application Protocol (WAP) Architecture and Security - Wireless Mark-Up language (WML) – Introduction

**UNIT III****9**

Voice Enabling Pervasive Computing - Voice Standards - Speech Applications in Pervasive Computing and security

**UNIT IV****9**

PDA in Pervasive Computing – Introduction - PDA software Components, Standards, emerging trends - PDA Device characteristics - PDA Based Access Architecture

**UNIT V****9**

User Interface Issues in Pervasive Computing, Architecture - Smart Card - based Authentication Mechanisms - Wearable computing Architecture

**TOTAL PERIODS: 45****REFERENCES**

**MCS017****DIGITAL IMAGING****L T P C**  
**3 0 0 3****OBJECTIVES:**

1. To study the fundamentals of image processing
2. To study the various image enhancement techniques
3. To know the various image compression standards
4. To know the applications of image processing

**UNIT I      FUNDAMENTALS OF IMAGE PROCESSING      9**

Introduction – Steps in Image Processing Systems – Image Acquisition – Sampling and Quantization – Pixel Relationships – Colour Fundamentals and Models, File Formats, Image operations – Arithmetic, Geometric and Morphological.

**UNIT II      IMAGE ENHANCEMENT      9**

Spatial Domain Gray level Transformations Histogram Processing Spatial Filtering – Smoothing and Sharpening. Frequency Domain: Filtering in Frequency Domain – DFT, FFT, DCT – Smoothing and Sharpening filters – Homomorphic Filtering.

**UNIT III      IMAGE SEGMENTATION AND FEATURE ANALYSIS      9**

Detection of Discontinuities – Edge Operators – Edge Linking and Boundary Detection – Thresholding – Region Based Segmentation – Morphological WaterSheds – Motion Segmentation, Feature Analysis and Extraction.

**UNIT IV      MULTI RESOLUTION ANALYSIS AND COMPRESSIONS      9**

Multi Resolution Analysis: Image Pyramids – Multi resolution expansion – Wavelet Transforms. Image Compression: Fundamentals – Models – Elements of Information Theory – Error Free Compression – Lossy Compression – Compression Standards.

**UNIT V      APPLICATIONS OF IMAGE PROCESSING      9**

Image Classification – Image Recognition – Image Understanding – Video Motion Analysis – Image Fusion – Steganography – Digital Compositing – Mosaics – Colour Image Processing.

**MCS019 DATA WAREHOUSING AND DATA MINING****L T P C  
3 0 0 3****OBJECTIVES:**

- To introduce the basics of data warehousing
- To know the data mining functionalities
- To study the various classification methods
- To understand the concept of cluster analysis

**UNIT I****9**

Data Warehousing and Business Analysis: - Data warehousing Components –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools – Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – OLAP and Multidimensional Data Analysis.

**UNIT II****9**

Data Mining: - Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation. Association Rule Mining: - Efficient and Scalable Frequent Item set Mining Methods – Mining Various Kinds of Association Rules – Association Mining to Correlation Analysis – Constraint- Based Association Mining.

**UNIT III****9**

Classification and Prediction: - Issues Regarding Classification and Prediction – Classification by Decision Tree Introduction – Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Ensemble Methods – Model Section.

**UNIT IV****9**

Cluster Analysis: - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – Grid-Based Methods – Model-Based Clustering Methods – Clustering High-Dimensional Data – Constraint- Based Cluster Analysis – Outlier Analysis.

**UNIT V****9**

Mining Object, Spatial, Multimedia, Text and Web Data: Multidimensional Analysis and Descriptive Mining of Complex Data Objects – Spatial Data Mining – Multimedia Data Mining – Text Mining – Mining the World Wide Web.

**TOTAL: 45 PERIODS**

**REFERENCES**

**MCS023****ADVANCED DATABASES****L T P C  
3 0 0 3****OBJECTIVES:**

- To understand the parallel and distributed databases and architectures
- To study the concepts of object and relational databases
- To study about XML, Mobile and multimedia databases

**UNIT I PARALLEL AND DISTRIBUTED DATABASES 10**

Database System Architectures: Centralized and Client-Server Architectures – Server System Architectures – Parallel Systems- Distributed Systems – Parallel Databases: I/O Parallelism – Inter and Intra Query Parallelism – Inter and Intra operation Parallelism – Distributed Database Concepts - Distributed Data Storage – Distributed Transactions – Commit Protocols – Concurrency Control – Distributed Query Processing – Three Tier Client Server Architecture- Case Studies.

**UNIT II OBJECT AND OBJECT RELATIONAL DATABASES 10**

Concepts for Object Databases: Object Identity – Object structure – Type Constructors – Encapsulation of Operations – Methods – Persistence – Type and Class Hierarchies – Inheritance – Complex Objects – Object Database Standards, Languages and Design: ODMG Model – ODL – OQL – Object Relational and Extended – Relational Systems : Object Relational feature sin SQL/Oracle – Case Studies.

**UNIT III XML DATABASES 8**

XML Databases: XML Data Model – DTD - XML Schema - XML Querying – Web Databases –JDBC – Information Retrieval – Data Warehousing – Data Mining

**UNIT IV MOBILE DATABASES 8**

Mobile Databases: Location and Handoff Management - Effect of Mobility on Data Management - Location Dependent Data Distribution - Mobile Transaction Models - Concurrency Control - Transaction Commit Protocols- Mobile Database Recovery Schemes

**UNIT V MULTIMEDIA DATABASES 9**

Multidimensional Data Structures – Image Databases – Text/Document Databases- Video Databases – Audio Databases – Multimedia Database Design.
