NATIONAL ENGINEERING COLLEGE

(An Autonomous Institution Affiliated to Anna University Chennai)

K.R.NAGAR, KOVILPATTI

www.nec.edu.in

REGULATIONS – 2023

CURRICULUM & SYLLABUS

B. E. COMPUTER SCIENCE AND ENGINEERING

(Outcome Based Education & Choice Based Credit System)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

I. VISION

To produce globally competent, innovative and socially responsible computing professionals

II. MISSION

- To provide world-class teaching-learning and research facilities
- To stimulate students' logical thinking, creativity, and communication skills
- To cultivate awareness about emerging trends through self-initiative
- To instill a sense of societal and ethical responsibilities
- To collaborate with industries and government organizations

III. PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO 1: Achieve their professional career in industry/academia by applying the acquired knowledge of computer science and engineering.

PEO 2: Engage in life-long learning and enhance their capabilities by embracing cutting edge technical advancements.

PEO 3: Excel in collaboration with interdisciplinary teams and diverse stake holders for persevering successful start-ups.

IV. PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO1: Build domain specific expertise by showcasing deliverables in the field of Application development, Business Intelligence, Computational Intelligence and Cyber Security

PSO2: Build knowledge base for students to solve complex technical problems through participation in global contests and hackathons.

V. PROGRAM OUTCOMES (POs)

PO 1: Apply **knowledge** of mathematics, natural science, computing and engineering **fundamentals**, with **specializations** in computational intelligence, web development, business intelligence, and cyber security to develop solutions to **complex engineering problems**

PO 2: Identify, formulate, research literature and analyze **complex engineering problems** reaching substantiated conclusions using **first principles** of mathematics, natural sciences and engineering sciences with holistic considerations for sustainable development

PO 3: **Design creative solutions** for **complex engineering problems** anddesign systems, components or processes to meet identified needs with appropriate consideration for public health and safety, whole-life cost, net zero carbon as well as resource, cultural, societal, and environmental considerations as required

PO 4: Conduct **investigations** of **complex engineering problems** using research methods

including **research-based knowledge, design of experiments, analysis and interpretation of data, and synthesis of information** to provide valid conclusions

PO 5: **Create, select and apply, and recognize** limitations of appropriate techniques, resources, and modern engineering and IT tools, including prediction and modeling, to **complex engineering problems**

PO 6: When solving complex engineering problems, analyze and evaluate sustainable development impacts to: society, the economy, sustainability, health and safety, legal frameworks, and the environment

PO 7: Apply ethical principles and commit to professional ethics and norms of engineering practice and adhere to relevant national and international laws. Demonstrate an understanding of the need for diversity and inclusion

PO 8: Function effectively as an individual, and as a member or leader in diverse and inclusive teams and in multi-disciplinary, face-to-face, remote and distributed settings

PO 9: Communicate effectively and inclusively on **complex engineering activities** with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, taking into account cultural, language, and learning differences

PO10: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments

PO11: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change

Estd : 1984

L: 15; TOTAL: 15 PERIODS

Course Code	MATHEMATICAL FOUNDATIONS FOR ENGINEERS	L	T	P	E	C
23SH12C	(Common to all B.E. / B.Tech. Degree Programmes)	**3**	**1**	**0**	**0**	**4**

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: interpretthe nature of quadratic form by orthogonal transformation.
CO2: identify the maxima and minima of functions.
CO3: solve ordinary differential equations.
CO4: find the solution of partial differential equations.
CO5: evaluate integrals of multivariate calculus.

Soft skill Component

CO6 :develop communication, problem solving and interpersonal skills

CO1: interpret the nature of quadratic form by orthogonal transformation. **L:9, T:3**

Characteristic equation – Eigen values and Eigen vectors of a real matrix – Properties of Eigen values and Eigen vectors – Diagonalisation of a matrix by orthogonal transformation – Quadratic forms – Reduction of quadratic form to canonical form by orthogonal transformation and its nature; Cayley – Hamilton theorem (excluding proof) - Application: Stretching of a elastic membrane.

CO2: identify the maxima and minima of functions. **L:9, T:3**

Functions of two variables: Limit, continuity and partial derivatives; Total derivative, Jacobian, Taylor series- Application :Linearization of Non Linear systems using Taylor Series - Maxima and minima - Method of Lagrange multipliers.

CO3: solve ordinary differential equations. **L:9, T:3**

Solutions of first order ordinary differential equations - Equations solvable for ‘p’, equations solvable for ‘y’, equations solvable for ‘x’ - Solutions of higher order linear differential equations with constant coefficients – Cauchy’s and Legendre’s linear equations - Method of variation of parameters – Solution of simultaneous linear differential equation. Application RCL – circuit and Mass Spring System.

CO4: find the solution of partial differential equations. **L:9, T:3**

Formation of partial differential equations – Solutions of standard types of first order partial differential equations - Lagrange’s linear equations - Solutions of homogeneous and Non homogeneous linear partial differential equations of second and higher order with constant coefficient – Application - Shallow wave equations of first order PDE.

CO5 : evaluate integrals of multivariate calculus **L:9, T:3**

Double integration – Cartesian and polar coordinates - Change of order of integration - Change of variables - Cartesian to polar coordinates - Area as double integral - Triple integration - Cartesian and polar coordinates – Change of Variables- Cartesian to spherical and cylindrical coordinates. Application – Moments and centers of mass.

Course Code	INTRODUCTION TO ENGINEERING	L	T	P	E	C
23SH13C	(Common to all B.E. / B.Tech. Degree Programmes)	**1**	**0**	**0**	**0**	**1**

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: articulate the importance of Engineering and its role in society through OBE framework
CO2: identify and describe academic pathways towards career settlement

CO1: articulate the importance of Engineering and its role in society through OBE framework

Engineering – An introduction, Classification of different Engineering Disciplines, Role of Engineers in Society. Graduate Attributes (GA), Program Specific Criteria (PSC)- Program Educational Objectives (PEO), Program Outcomes (PO), Course Outcomes (CO), Choice Based Credit System (CBCS), course categories, teaching and learning process, active and passive learning, project / problem based learning, different assessments process. **L:9**

CO2: identify and describe academic pathways towards career settlement

Curriculum, cafeteria curriculum and self learning big picture of the Program and the significance of each course in the undergraduate Engineering Program, Discuss the different career paths for an engineering graduate. Career objective, competency requirement.

Case study: Each student has to interact with alumni mentors/seniors/faculty members/surf the internet and present a career path that inspires him/her at the end of the course **L:6**

Course Code	TECHNICAL ENGLISH	L	T	P	E	C
23SH14C	(Common to all B.E. / B.Tech. Degree Programmes)	**1**	**0**	**2**	**0**	**2**

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: apply the fundamental grammar rules in writing

CO2: utilizing phonetic transcription for pronunciation

Practical Component

CO3: apply the basic language skills in various aspects of communication

CO4: utilize technical terms and phrases in specific contexts

CO5: develop the pronunciation skill through various language components

CO6: distinguish different writing forms and interpret text through divergent thinking

CO7: develop effective reports with grammatical and language components

Soft skill Component

CO8: develop communication, team spirit, creativity and time management

CO1: apply the fundamental grammar rules in writing **L:13, P:26**

Parts of Speech - Word Formation using Prefix and Suffix - Sentence formation (Kinds of Sentences) - Tenses (Present, Past & Future tense) – Concord

CO3: apply the basic language skills in various aspects of communication

Diary Writing - Greeting and Self Introduction

CO4: utilize technical terms and phrases in specific contexts

Technical terms and extended definition - Essay Writing (Argumentative Essay and Analytical Essay) - Situational phrases & Conversation - Formal Letter Writing (Permission & Requisition letters)

CO6: distinguish different writing forms and interpret text through divergent thinking

Picture Description, Introduction to Reading Techniques (Skimming, scanning, inferring, predicting, Reading and Reviewing a book (Sci – Fi), E Mail Writing

CO7: develop effective reports with grammatical and language components
Listening and responding to general information (Business context) - Report Writing (Types, Structure, and Stages of report writing) - Checklist

CO2:utilizing phonetic transcription for pronunciation **L:2,**

Phonetics (Vowels & Consonants) **P:4**

CO5: develop the pronunciation skill through various language components

Word Transformation from one form to another - Letter Writing (Informal) - Listening and responding to general information (General context)

Course Code	ENGINEERING PHYSICS	L	T	P	E	C
23SH15C	(Common to all B.E. / B.Tech. Degree Programmes)	**2**	**0**	**2**	**0**	**3**

COURSE OUTCOMES:

Upon successful completion of the course the students will be able to:

Theory Component:

CO1: identify the structural properties of crystalline materials
CO2: comprehend and apply the concepts of centre of mass and elasticity
CO3: explain thermodynamic parameters and fundamental laws and their application in various processes
CO4: illustrate the applications of different lasers and optical fibers
CO5:interpret the quantum concepts, to illustrate the quantization of energy, and computation

Practical Component:

CO6: compare the mechanical properties of the materials due to bending and torsion
CO7: analyze thermal conductivity of different bad conducting materials
CO8: explore the light-matter interaction by the phenomenon of interference and diffraction and photoelectric effect

Soft skill Component:

CO9: develop the team spirit and communication skill through group activities

CO1: identify the structural properties of crystalline materials L:10

Crystalline and amorphous materials - unit cell - primitive cell - crystal systems, Bravais lattices - Miller indices – interplanar distance – Characteristics of SC, BCC, FCC, HCP

structures - Bragg's law - X-ray diffraction and its applications - Synthesis of crystalline materials

CO2: comprehend and apply the concepts of centre of mass and elasticity **L:6, P:10**

CO6: compare the mechanical properties of the materials due to bendingand torsion

Multi-particle dynamics - Introduction - Center of mass (CM) – CM of continuous bodies - Introduction to rigid bodies - translation - rotation – moment of inertia – theorems of moment of inertia – Torsional pendulum.

Elasticity – Stress - strain diagram and its applications - Moduli of elasticity and its relation - bending of beams - Bending moment – cantilever - theory and experiment - Uniform bending - theory and experiment – Non Uniform bending - I-shaped girders

CO3: explain thermodynamic parameters and fundamental laws and their application in various processes **L:6, P:8**

CO7: analyse thermal conductivity of different bad conducting materials.

Laws of thermodynamics –Thermo dynamical processes – Introduction to heat transfer – conduction - convection and radiation – thermal conductivity of good conductor –Radial flow of heat - Spherical shell method and cylindrical shell method – Thermal conductivity of poor conductor- Lee's disc method– Applications - heat exchangers - refrigerators and ovens

CO4: illustrate the applications of different lasers and optical fibers **L:6, P:6**

CO8: explore the light-matter interaction by the phenomenon ofInterference and diffraction and photoelectric effect

Lasers: Interaction of light with matter - Einstein coefficients and their relations – characteristics of laser - components of laser – Lasing action – Pumping methods – Types of Laser - Nd-YAG laser -semiconductor laser- Applications

Fiber optics: principle and classification of optical fibers – propagation of light in optical fiber - Numerical aperture and Acceptance angle – losses associated with optical fibers (Qualitative) – Fiber optic communication system - Applications - Displacement and pressure sensors – Endoscopy

CO5: interpret the quantum concepts, to illustrate the quantization of energy, and computation **L:6, P:2**

CO8: explore the light-matter interaction by the phenomenon of interference and diffraction and photoelectric effect

Planck's radiation law - de-Broglie hypothesis – Matter waves - Heisenberg's uncertainty principle – elementary proof – applications – Schrödinger's time-dependent and time-independent wave equation – physical significance of wave function – Introduction to quantum tunneling - applications - particle in a one-dimensional box – tunneling microscope – quantum confinement in 0D, 1D, 2D systems - quantum computation

Course Code	ENGINEERING CHEMISTRY	L	T	P	E	C
23SH16C	(Common to all B.E. / B.Tech. Degree Programmes)	**2**	**0**	**2**	**0**	**3**

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: explain the suitable water treatment technologies for domestic and industrial applications

CO2: apply the knowledge of corrosion to solve the industrial problems

CO3: describe the preparation, properties and their applications of smart materials in various sectors

CO4: describe the basic components and performance analysis of batteries

CO5: predict the mechanical, electrical and electronics properties of materials using various instrumentation techniques

Practical Component

CO6: estimate the amount of Ca^{2+}/ Mg^{2+}, alkalinity and Chloride ion present in the water sample.

CO7: quantify the amount of acid and metal ion in the given samples by different analytical techniques

Soft skill Component

CO8: develop interpersonal, work ethics and communications skills for career settlement

CO1: explain the suitable water treatment technologies for domestic andindustrial applications

CO6: estimate the amount of Ca^{2+}/ Mg^{2+}, alkalinity and Chloride ion present in the water sample.

Introduction, sources and impurities in water, potable water specifications (as per WHO and BIS) - hardness-types-estimation of $Ca^{2+}$and Mg^{2+} ion in water by EDTA method. Alkalinity-types-determination of alkalinity of water -chronic daily intake - incremental life time risk - hazard quotient, hazard index, contamination factor - determination of chloride ion in water using Argentometric method-municipal water treatment- physical methods and chemical methods. Disinfection-internal conditioning - calgon and carbonate conditioning. Desalination-types-Reverse Osmosis (RO) process- Forward osmosis (FO) - electro dialysis - demineralization. **L:6, P:12**

CO2: apply the knowledge of corrosion to solve the industrial problems.

CO7: quantify the amount of acid and metal ion in the given samples by different analytical techniques

Corrosion – mechanism of dry and wet corrosion-forms of corrosion– galvanic corrosion and differential aeration corrosion, crevice corrosion, pitting corrosion, microbial corrosion-stress corrosion, intergranular corrosion - determination of rate of corrosion by weight loss method. **L:6, P:6**

Protection: cathodic protection, surface coatings, corrosion inhibitors. Corrosion of

industrial components: corrosion and its control in power industries, automotive industries, chemical processing industries and marine industries.

CO3: describe the preparation,properties and their applications of smart materials in various sectors

Polymers: introduction - classification - functional polymers: electroluminescence polymer, biodegradable polymers, fire retardant polymer, thermo responsive polymer - piezo, ferro and pyroelectric polymer - nanocomposites: introduction, synthesis, properties & applications- synthesis of nanocomposites using sol -gel process **L:6**

CO4: describe the basic components and performance analysis of batteries

Introduction - components - operation principle - Lead acid – Nickel metal hydride batteries- Lithium ions batteries: Lithium polymer battery, Lithium sulphur battery - fabrication and performance evaluation- safety issues - battery management system - recycling of lithium batteries. **L:6**

CO5:predict the mechanical, electrical and electronics properties of materials using various instrumentation techniques

CO7: quantify the amount of acid and metal ion in the given samples by different analytical techniques.

Spectroscopy methods: Beer-Lambert's law and its limitations– UV-visible spectroscopy and IR spectroscopy – principle - instrumentation– applications. Estimation of copper. Electro analytical methods: potentiometric titration - Estimation of Fe^{2+} ion by potentiotometric method. Conductometric method-estimation of HCl by conductometric titration- pH metric method-Estimation of HCl by pH metric titration- applications. Thermal analytical methods: Thermal Gravimetric Analysis (TGA) and Differential Thermal Analysis (DTA)- Thermo Mechanical Analysis (TMA) –principle - instrumentation - Thermo gravimetric analysis of $CuSO_4.5H_2O$- applications. **L:6, P:12**

Course Code	PROBLEM SOLVING TECHNIQUES	L	T	P	E	C
23CS11C	(Common to all B.E. / B.Tech. Degree Programmes)	3	0	2	0	4

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1:apply fundamentals of problem solving techniques to develop simple algorithms for arithmetic and logical problems

CO2:apply fundamental, sequential, conditional logic statements and arrays for solving basic problems

CO3: implement modular programming concept using user defined functions

CO4: inscribe programs using pointers and to allocate memory for user defined data types using dynamic memory management functions

CO5: develop file processing application programs

Practical Component

CO6: develop programs for simple algorithms using sequential and Control structures

CO7: inscribe programs using arrays, functions and pointers to work with multiple data items.

CO8: develop application programs using structures and files concept.

CO1: apply fundamentals of problem solving techniques to develop simple algorithms for arithmetic and logical problems **L:6**

Overview of programming: Problem Solving in Everyday Life, Types of Problem, Computer-based problem solving, Algorithms - Building blocks of algorithms (statements, control flow, functions) - Notation (pseudo code, flow chart) – Problem solving aspect – Top down design – Implementation of algorithms – Program Verification – Efficiency of algorithms – Analysis of algorithm.

CO2: apply fundamental, sequential, conditional logic statements and arrays for solving basic problems **L:12, P:10**

Data Types - Constants – Variables - Keywords – Operators– Problem Solving using fundamental algorithms. Control Statements: Branching and Looping - Algorithms Using Selection and Repetition - Summation of a set of numbers, Reversing Digits of an Integer - Implementation of fundamental algorithms and factoring methods - Array Techniques - Array order reversal, Array Counting, Finding maximum and the minimum value in a set

CO6: develop programs for simple algorithms using sequential and Control structures

Solve problems using control statements (Decision making and Looping)

CO7: inscribe programs using arrays, functions and pointers to work with multiple data items.

Problem solving based on Array Handling(1D and 2D, Multi-dimensional arrays, traversal, rotation) - Solve problems to handle strings

CO3: implement modular programming concept using user defined functions **L:10, P:8**

Modular Programming approach: Modularization and recursion - Bubble Sort,

Selection Sort, Linear Search, Binary Search, Implementation of sorting and searching

CO7: inscribe programs using arrays, functions and pointers to work with multiple data items.

Solve problems by using modular approach (Functions and Recursion)

CO4: inscribe programs using pointers and to allocate memory for user defined data types using dynamic memory management functions **L:12, P:10**

Pointer Concept – add numbers using call by reference – finding maximum number from list of numbers - permutations of a given string using pointers – Implementation of function returns a pointer;

Structures &Union - finding the largest element of an array using Dynamic Memory Allocation – Implementation of Student database in structure using Dynamic Memory Allocation;

CO7: inscribe programs using arrays, functions and pointers to work with multiple data items.

Build efficient solutions to manage memory efficiently through Pointers.

CO8: develop application programs using structures and files concept.

Develop applications using Structures

CO5: Develop file processing application programs **L:5, P:2**

File Handling: Files - Introduction, Types of file processing: Sequential access, Random access – Implementation of word count, copy file, Voter's age validation, Marks range validation

CO8: Develop application programs using structures and files concept.

Develop appliactions using Files

L: 45; P: 30; TOTAL: 75 PERIODS

Course Code	BASIC ELECTRICAL AND ELECTRONICS	L	T	P	E	C
23EE11C	ENGINEERING	3	0	2	0	4

COURSE OUTCOMES:

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: Demonstrate and explain the characteristic parameters of DC and AC circuits.
CO2: Explain the working of AC and DC machines.
CO3: Describe analog and digital instruments for monitoring and control.
CO4: Demonstrate the operation of electronic devices for applications.
CO5: Describe the purpose of safety standards and equipment.

Practical Component

CO6: Analyze the basic electric circuits and characteristics of electrical machines.
CO7: Demonstrate the functionality of instruments and characteristics of electronics devices.
CO8: Perform residential wiring and measure earth resistance.

CO1: Demonstrate and explain the characteristic parameters of DC and AC circuits **L:9, P:6**

Sources - Passive Elements – Electrical Quantities: Voltage, Current, Power and Energy. DC circuits: Ohms Law – Kirchhoff's Laws – Mesh analysis. AC Circuits: Waveforms, RMS, Peak, real power, reactive power and apparent power, power factor.

CO6: Analyze the basic electric circuits and characteristics of electrical machines

1. Verification of Ohms law & Kirchhoff law.
2. Measurement of power and power factor for R, L load

CO2: Explain the working of AC and DC machines **L:9, P:6**

Machines: Construction, Types of DC motors – Working Principles – Need for Starters - AC Motors: Construction and Working of Single Phase and Three Phase Induction Motor– Servomotor -Stepper motor.

CO6: Analyze the basic electric circuits and characteristics of electrical machines

1. Analyze the characteristics of DC Shunt Motor and DC series motor
2. Distinguish the operation of single phase and three phase induction motor

CO3: Describe analog and digital instruments for monitoring and control **L:9, P:6**

Analog instruments: Functional Elements, Principles: PMMC, MI, Electrodynamometer wattmeter – Digital voltmeter - multimeter – DSO – Digital Energy meter - Multifunction meter.

CO7: Demonstrate the functionality of instruments and characteristics of electronics devices.

1. Calibration of single phase energy meter using wattmeter
2. Measurement of AC signal parameter (Peak-Peak, RMS, Period and Frequency) using DSO

CO4: Demonstrate the operation of electronic devices for applications **L:9, P:6**

Characteristics and applications: Diode – Rectifiers, Zener Diode – Regulators, BJT - Configuration, Amplifier – LEDs – Photo Diodes, Opto-Isolators.

CO7: Demonstrate the functionality of instruments and characteristics of electronics devices.

1. Experimental Verification of PN Junction diode as rectifier.
2. Experimental Verification of Zener Diode as Voltage Regulators.
3. Input and Output Characteristics of BJT in CE Configuration.

CO5: Describe the purpose of safety standards and equipment **L:9, P:6**

Electric shock -Protection: PPE, Switches, Plug and Socket, Fuse, MCB, ELCB, MCCB and Earthing - Types of wires and cables - Energy storage devices - Inverters – UPS - Energy Consumptions and Battery Charging system – Electrical safety standards in IT industry – Schematic Electrical Layout of Computer Lab with battery backup.

CO8: Perform residential wiring and measure earth resistance

1. Measurement of Earth Resistance using Electrical Equipment.
2. Harness residential house wiring, staircase wiring and fuse connections

Course Code	APTITUDE ESSENTIALS	L	T	P	E	C
23GN01C	(Common to all B.E. / B.Tech. Degree Programmes)	**1**	**0**	**0**	**0**	**1**

COURSE OUTCOMES:

Upon the completion of the course the students will be able to

CO1: Recall the fundamentals in quantitative techniques and solve Number series problems quickly
CO2: Develop problem solving skills on Numbers and enhance arithmetic ability
CO3: Infer appropriate comparison and distribution methods using ratio and to form equations
CO4: Improve quantitative skills and solve problems on percentages and profit loss
CO5: Calculate data interpretation and data sufficiency in quantitative aptitude

CO1: Recall the fundamentals in quantitative techniques and solve Number series problems quickly **L : 3**

Numeric series – Finding missing numbers – Odd number out series - Letter series – Symbol series - Alphanumeric series

CO2: Develop problem solving skills on Numbers and enhance arithmetic ability **L : 3**

Number Types - HCF & LCM – Square root- Cubic root - divisibility criteria- Unit digit calculation- Prime factors

CO3: Infer appropriate comparison and distribution methods using ratio and to form equations **L : 3**

Ratio & Proportion: Comparison of Ratios - Variations: Direct and indirect proportionAges: Present Age, Past Age & Future calculation

CO4: Improve quantitative skills and solve problems on percentage and profit loss **L : 3**

Concept of Percentage – Percentage calculation - Calculation of Percentage on Population Results on Depreciation .Profit and Loss –Percentage of Profit and Loss – Discount

CO5: Calculate data interpretation and data sufficiency in quantitative aptitude **L : 3**

Data Interpretation – Pie Chart – Bar Chart – Table Chart .Data Sufficiency in Logical Reasoning : Numbers, Ratio, Ages, Percentage and Profit Loss

23CS21C		3	0	0	0	3

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: apply the principles of number systems and logic gates to design digital circuits
CO2: design of combinational and sequential logic circuits for basic processing units
CO3: analyze the design of Asynchronous Sequential circuits
CO4: apply the concept of Programmable Logic Devices for the design of digital circuits
CO5: implement the Digital Logic circuits using VHDL and functions

CO1: apply the principles of number systems and logic gates to design digital circuits **L:9**

Number Systems and Codes - Binary Number system - Binary to decimal - decimal to binary – hexadecimal - ASCII code - Excess-3 Code - Gray code - Digital Logic - Basic Gates-Universal Logic Gates - Combinatorial Logic Circuits - Boolean Laws and Theorems-Sum of Products method - Truth table to Karnaugh Map - Don't Care Conditions

CO2: design of combinational and sequential logic circuits for basic processing units **L:9**

Arithmetic Circuits - Binary Addition and Subtraction - 2's Complement Representation– Data Processing Circuits - Multiplexers - Demultiplexers - Decoders - Encoders - Sequential Circuits - Flip-Flops -operation and excitation tables - Triggering of FF - Analysis and design of clocked sequential circuits - Moore/Mealy models - state minimization and state assignment- Design and analysis of sequential circuits

CO3:analyze the design of Asynchronous Sequential circuits **L:9**

Asynchronous sequential logic circuits - Stable and Unstable states - output specifications - cycles and races - state reduction - race free assignments - Hazards - Design and analysis of asynchronous sequential circuits

CO4:apply the concept of Programmable Logic Devices for the design of digital circuits **L:9**

Classification of memories - ROM organization – PROM – EPROM – EEPROM - RAM organization - Write operation - Read operation - Static RAM - Programmable Logic Devices - Programmable Logic Array (PLA) - Programmable Array Logic

CO5:implement the Digital Logic circuits using VHDL and functions **L:9**

Introduction to HDLs Library – Entity – Architecture - Modeling styles -Data flow modeling –Behavioral modeling - Structural modeling - Data objects - Concurrent and sequential statements - Design examples using VHDL for basic combinational and sequential circuits

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: illustrate the validity of the arguments.
CO2: analyze the concepts of Sets, Relations and Functions.
CO3: perform the principles of counting and solve recurrence relations.
CO4: interpret the basic concepts of graphs.
CO5: compute minimum Spanning trees and shortest routefor the graph.

CO1: illustrate the validity of the arguments.

Propositional Logic – Equivalences and Implications – Normal forms –Predicate Calculus and Quantifiers - Rules of inference – Proof methods and Strategies - Forward Proof, Proof by Contradiction, Proof by Contraposition, Proof of Necessity and Sufficiency. **L:9,T:3**

CO2: analyze the concepts of Sets, Relations and Functions

Basic Definitions - Set operations – Laws of set theory – Relations – Properties of relations - Partial Ordering Relation - Equivalence Relation - Matrices of relations - Closure of relations – Functions – Bijective functions - Inverse and Compositions of functions. **L:9,T:3**

CO3: perform the principles of counting and solve recurrence relations.

Mathematical induction - Strong induction and well ordering -The basics of counting – The pigeonhole principle - Permutations and combinations – Recurrence relations – Solving linear recurrence relations – Generating functions - Inclusion and exclusion principle. **L:9,T:3**

CO4:interpret the basic concepts of graphs

Graphs and their properties - Special types of graphs – Matrix representation of graphs and graph isomorphism- connectivity, Cut vertex and cut edge - Euler and Hamiltonian graphs. **L:9,T:3**

CO5: compute minimum Spanning Trees and shortest route for the graph

Trees – Some properties of Trees – Pendant vertices in a Tree – Distance and centers in a Tree – Rooted and Binary Trees - Spanning Trees- minimum spanning tree–Prim's algorithm- shortest route - Dijkstra's algorithm **L:9,T:3**

Course Code	PROFESSIONAL ENGLISH	L	T	P	E	C
23SH22C	(Common to all B.E. / B.Tech. Degree Programmes)	2	0	2	0	2

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: extend the primary language skills to develop critical thinking

CO2: build the secondary language skillsfor professional competence

Practical Component

CO3: apply the vital sub-functions of listening in particular context

CO4: take part in propagating ideas through effective oral communication

CO5: inferring information using various reading techniques

CO6: construct professional content via distinct methods of writing

Soft skill Component

CO7: develop interpersonal, communicational and behavioral attributes

CO1:extend the primary language skills to develop critical thinking
CO3: apply the vital sub-functions of listening in particular context **L:6,P:16**
CO4: take part in propagating ideas through effective oral communication

If Conditionals – Standard Abbreviations –Types of Listening (Comprehensive, Informational, Critical Listening) –One Word Substitution, Components of Speaking
Listening for Specific Information –Listening to Speech (Oxford Union Society) – Listening to Science Talks or Theories
Product Description – Chart Description – Process Description – Group Discussion (Uses – Structure – Strategies – Team Work – Positive & Negative Body Languages – Samples – Demo)

CO2:build the secondary language skills for professional competence **L:5,P:18**
CO5: inferring information using various reading techniques
CO6: construct professional content via distinct methods of writing
Synonyms – Intensive and Extensive Reading –Error Spotting (Based on Concord, Pronoun, Articles & Adverb Placement)– Writing Style (Persuasive, Expository & Descriptive)
Newspaper Reading – Reading Comprehension (Fiction & NonFiction)
Business Letters for Quotations and Clarification, Placing Orders and Making Complaints – Proposal Writing – Job Application Letter & Resume Preparation – Paragraph Writing – Content Writing

TEXT BOOKS:

Course Code	SEMICONDUCTOR AND QUANTUM PHYSICS	L	T	P	E	C
23CS23C		2	0	2	0	3

COURSE OUTCOMES:

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: explain the conductivity in metals using free electron theories
CO2: describe the fundamental properties of semiconductors
CO3: illustrate the optical properties and their applications to optical devices
CO4: apply the basics of sensing and imaging techniques in engineering and medical applications
CO5: apply the concepts of quantum mechanics in quantum computing

Practical Component:

CO6:determine the bandgap and hall coefficient of semiconductors
CO7: demonstrate the I-V characteristics of PN junction diodes
CO8: analyze the characteristics of light sensor
CO9:demonstrate the basic quantum computing using simulation

Soft skill Component:

CO10: develop a sense of teamwork and enhance communication abilities through collaborative group activities

CO1: explain the conductivity in metals using free electron theories

Conduction in metals - Classical free electron theory of metals – Mobility and electrical conductivity - Thermal conductivity of metals – Wiedemann-Franz law – Quantum free electron theory - Merits and limitations of free electron theory - Fermi-Dirac Statistics - Density of States. **L:6**

CO2: describe the fundamental properties of semiconductors
CO6: determine the bandgap and hall coefficient of semiconductors

Energy band diagram - Direct and indirect band gap - Intrinsic semiconductors - Carrier concentration and Fermi level in an intrinsic semiconductor- Extrinsic semiconductors - Carrier concentration and Fermi level in N-type and P-type semiconductors - Hall effect – Determination of band gap and hall coefficient **L:6 P:8**

CO3: illustrate the optical properties and their applications to optical devices
CO7: demonstrate the I-V characteristics of PN junction diodes

Classification of optical materials – Absorption emission and scattering of light in metals, insulators and semiconductors (quantitative) – Carrier generation and recombination - photocurrent in a P-N diode – Principle and working of solar cell - LED – Organic LED **L:6 P:12**

– Laser diodes - Photo diode – Determination of V-I Characteristics -Photoconductors - Optical data storage techniques.

CO4: apply the basics of sensing and imaging techniques in engineering and medical applications

CO8: analyze the characteristics of light sensor **L:6**

Sensors - principle – working – bio sensors -LDR– Determination of V-I-Characteristics- wearable sensors in health care- Medical imaging techniques – ultrasound- Non destructive testing (NDT) - X ray –CT scan – MRI scan-FMRI Scan **P:4**

CO5: apply the concepts of quantum mechanics in quantum computing

CO9: demonstrate the basic quantum computing using simulation

Introduction - Quantum confinement - Band gap of nanomaterials – Quantum tunneling – Quantum cellular automata - Quantum system for information processing - Quantum states – Classical bits – Quantum bits –CNOT gate - Multiple qubits – quantum gates – Fundamental quantum computing experiment using simulation software-Advantage of quantum computing **L:6 P:6**

Course Code	ENGINEERING GRAPHICS	L	T	P	E	C
23ME11C	(Common to MECH, CIVIL, AIDS, EEE, IT)	**2**	**0**	**4**	**0**	**4**

COURSE OUTCOMES:

Upon the successful completion of the course, the student will be able to

CO1: Construct the Engineering Curves and Perform Freehand Sketching.

CO2: Construct the Orthographic Projections of Points, Straight Lines and Lamina

CO3: Draw the Projections of Simple Solids in Different Positions.

CO4: Visualize the Sectional Views and Surface of Various Solids.

CO5: Draw the Isometric and Perspective Projections of Various Solids.

CO1: Construct the Engineering Curves and Perform Freehand Sketching. **L:6, P:12**

Principles of Engineering Graphics – significance. Usage of Drawing Instruments. Lettering and dimensioning exercise Construction of ellipse, parabola and hyperbola

using eccentricity method– Construction of cycloids, Epi and Hypo-cycloids. Orthographic views of simple components by Free hand drawing - Transferring measurement from the given object to the free hand sketches.

CO2: Construct the Orthographic Projections of Points, Straight Lines and Lamina **L:6, P:12**

Principle of orthographic projections – Conventions - First angle and third angle projections. Projections of points placed in all quadrants – projections of straight lines – inclined to both reference planes - determination of true length and inclinations. Projections of regular polygonal surfaces and circular lamina inclined to both reference planes.

CO3: Draw the Projections of Simple Solids in Different Positions. **L:6, P:12**

Projections of simple solids like prisms, pyramids, cylinder and cone - axis inclined to one reference plane - change of position method.

CO4: Visualize the Sectional Views and Surface of Various Solids. **L:6, P:12**

Sectioning of simple solids – Axis perpendicular to horizontal plane- Drawing sectional views with true shape of the section. Development of lateral surfaces of truncated solids – Prisms, pyramids, cylinder and cone.

CO5: Draw the Isometric and Perspective Projections of Various Solids. **L:6, P:12**

Principles of isometric projection – Isometric scale – Isometric projections of simple solids like prism, pyramid, cone and cylinder – Combination of solids. Perspective projections of simple solids by visual-ray method

L: 30; P: 60; TOTAL: 90 PERIODS

Course Code	OBJECT ORIENTED PROGRAMMING IN C++	L	T	P	E	C
23CS24C	(Common to CSE, IT & ECE)	**2**	**0**	**2**	**2**	**4**

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: apply the object oriented programming constructs to solve known applications

CO2: design effective application with inheritance, compile time and run time polymorphism

CO3: develop real-world applications by using files, streams, and exceptions

CO4: construct well-defined, efficient data handling strategies using templates and STL

Practical Component

CO5: demonstrate the basic OO principles such as class, objects, and constructors

CO6: implement code reusability through overloading, inheritance and polymorphism

CO7: solve problems using files and exception handling

CO8: employ problem solving skill using templates and STL

Experiential Component

CO9: create efficient solutions for solving real-world OOP applications

Soft Skill Component

CO10: demonstrate diversity and inclusive attitude while practicing project component as a team

CO1: apply the object oriented programming constructs to solve known applications **L:8;**
CO5: demonstrate the basic OO principles such as class, objects, and constructors **P:8;**
Introduction- Comparison between procedural programming paradigm and object-oriented programming paradigm. Features of object-oriented programming. Functions - Inline functions- Friend functions. Arrays -Array of objects. Pointer - Function pointer. Memory management: New and Delete. Classes and Objects - Access specifiers, Types of classes- Constructor and destructor - Types of constructor - Static members **E:8**

CO2:design effective application with inheritance, compile time and run time polymorphism **L:8;**
P:8;
CO6:implement code reusability through overloading, inheritance and polymorphism **E:10**
Function Overloading, Overloading Constructors, Ambiguity in Overloading. Operator overloading - Overloading Using Friend Function- Overloading New and Delete- Overloading Special Operators. Inheritance – Types of Inheritance - Typing Conversions and Visibility – Code Reuse- Aggregation. Polymorphism- Virtual Functions – Pure Virtual Functions – Early vs. Late Binding. Run-Time Type ID and Casting Operators: RTTI – Casting Operators – Dynamic Cast.

CO3: develop real-world applications by using files, streams, and exceptions **L:7;**
CO7: solve problems using files and exception handling **P:6;**
Streams and Files: Streams classes - Sequential Input and Output operations – Random Access - File pointers - Error handling in file I/O with member function - command line arguments. Exception handling – expected and unexpected exceptions - uncaught exception - resource captures and release. Case study with real time applications. **E:4**

CO4:construct well-defined, efficient data handling strategies using templates and STL **L:7;**
P:8;
CO8: employ problem solving skill using templates and STL **E:8**
Templates- Generic programming - variadic templates – template compilation model – Generic Classes. Standard Template Library: Iterators – Auxiliary Iterator function –

Algorithms – Non-modifying sequence operations – mutating sequence operations – Containers: Sequence and associative containers - Algorithms, string class – explicit, mutable and operator keywords. Namespaces: user defined namespaces, namespaces provided by library

23CS31C	(Common to CSE, IT and AI&DS)	**3**	**0**	**0**	**0**	**3**

COURSE OUTCOMES

Upon completion of this course, the student will be able to

Theory Component

CO1: apply the fundamental design techniques of a digital computer to execute simple arithmetic operations

CO2: relate the execution sequence of an instruction to design the datapath and control unit for a processor

CO3: analyze the hierarchical structure of various memory systems and assess the performance

CO4: relate various types of I/O interfaces and their functionalities

CO5: analyze the impact of hazards in pipeline performance by utilizing the different stages of instruction execution in a pipelined processor

CO1: apply the fundamental design techniques of a digital computer to execute simple arithmetic operations **L:10**

Functional units – Basic operational concepts – Bus Structures – Performance – Memory locations and addresses – Instructions and instruction sequencing – Addressing modes.Arithmetic: Addition and Subtraction of Signed Numbers – Design of fast adders –

Multiplication of unsigned and signed numbers – Fast Multiplication – Integer division.

CO2: relate the execution sequence of an instruction to design the datapath and control unit for a processor **L:8**

Fundamental concepts – Execution of a complete instruction – Multiple bus organization – Instruction Fetch and Execution Steps – Control Signals – Hardwired control – Micro programmed control.

CO3: analyze the hierarchical structure of various memory systems and assess the performance **L:8**

Basic concepts – RAM – ROM – Cache memories – Improving cache performance – Virtual memory – Memory management requirements – Secondary storage devices.

CO4: relate various types of I/O interfaces and their functionalities **L:8**

Accessing I/O devices – Interrupts – Direct Memory Access – Buses – Interface circuits – Standard I/O Interfaces – PCI, SCSI, SATA, USB – Advanced IO interfaces.

CO5: analyze the impact of hazards in pipeline performance by utilizing the different stages of instruction execution in a pipelined processor **L:11**

Basic concepts – Parallel processing – Instruction pipeline – Data hazards – Instruction hazards – Influence on instruction sets – datapath and control consideration – Super scalar operation – RISC vs CISC processors – Instruction Level Parallelism – Parallel IO Organization – IO in Multicore Computers.

L: 45; TOTAL: 45 PERIODS

Course Code	DATA STRUCTURES	L	T	P	E	C
23CS32C	(Common to CSE & IT Degree Programmes)	3	0	0	0	3

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: apply appropriate sorting and searching algorithms using list for solving real world problems.
CO2: apply appropriate linear data structures for different applications.
CO3: implement various tree operations that handle non linear data organization.
CO4: employ suitable indexing and hashing techniques for optimal data accessing.
CO5: implement various graph and its traversal techniques for solving network problems.

CO1: apply appropriate sorting and searching algorithms using list for solving real world problems. **L:10**

List ADT – Array based Implementation - Linked List Implementation – Singly linked list - Doubly linked list - Circular linked list – Sorting –Insertion Sort – Merge Sort – Quick Sort – Searching – Linear Search – Binary Search – Fibonacci Search.

CO2: apply appropriate linear data structures for different applications. **L:9**

Stack ADT – Operations (using Array and Linked List) – Applications of Stack – Balancing symbols – Infix to postfix conversion – Evaluating postfix expression.

Queue ADT – Operations (using Array and Linked List) – Circular Queue – De-Queue – Application of Queues.

CO3: implement various tree operations that handle nonlinear data organization. **L:10**

Tree ADT – Basic Tree Terminologies – Types of Trees – Binary tree ADT – Operations – Tree Traversals – Expression Trees - Binary search Tree ADT – Threaded Binary Tree - AVL Trees - Priority Queue(Heaps)

CO4: employ suitable indexing and hashing techniques for optimal data accessing. **L:7**

Indexing: B Tree and B+ Tree: Definitions – algorithms - Hashing: Hash Function – Separate chaining – Open Addressing – Rehashing – Extendible hashing - Dictionary: Dictionary ADT - Implementation

CO5: implement various graph and its traversal techniques for solving network problems. **L:9**

Graphs: Basic Terminologies and Representation – Types of graphs – Breadth first search – Depth first search – Bi-connectivity – Topological sort – Dijkstra's algorithm- Minimum Spanning Tree – Prim's algorithm – Kruskal's algorithm –Applications of Graphs

Course Code	**OPERATING SYSTEMS**	**L**	**T**	**P**	**E**	**C**
23CS33C	(Common to CSE, IT and AI&DS)	**2**	**1**	**0**	**0**	**3**

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: conceive the basic components and working principles of operating systems.
CO2: analyze CPU scheduling mechanisms for diverse scheduling criteria
CO3: devise the solutions for process synchronization issues.
CO4: relate various techniques for handling memory management.
CO5: apply file management and I/O management techniques.

CO1:conceive the basic components and working principles of operating systems. **L:6; T:1**

Introduction to operating systems - Types of operating system - structure of OS – system calls and its types – system programs – Processes : Concept – Process scheduling – operations on processes – Threads : concept – multithreading models – Inter process communication – Processes and threads in Linux os-Free and Open source-***Overview: Windows, Linux, Mobile, Real-Time, and Robotic Operating Systems.***

CO2: a*nalyze CPU scheduling mechanisms for diverse scheduling criteria* **L:6; T:3**

CPU Scheduling – basic concepts – scheduling criteria – Preemptive and non preemptive scheduling algorithms: FCFS, SJF, Priority, Round Robin – scheduling in Real Time Operating System (RTOS) – Rate Monotonic (RM) scheduling algorithm – Least Laxity First (LLF) scheduling algorithm **– *Simulation of process scheduling.***

CO3: devise the solutions for process synchronization issues. **L:6; T:3**

Process Synchronization – The Critical – Section problem – Peterson's solution – Mutex locks –concurrency - Semaphores – Classic problems of synchronization – monitors. Deadlock: System model – deadlock characterization – Methods for handling deadlock – deadlock prevention – deadlock avoidance – banker's algorithm – deadlock detection – recovery from deadlock.

CO4: relate various techniques for handling memory management. **L:6, T:4**

Memory management – Background – Swapping – Contiguous memory allocation – Segmentation – Paging – Segmentation with paging – Intel 32 and 64 bit Architectures-Virtual memory: Background – Demand paging – page replacement – algorithms: FIFO, LRU,Optimal-allocation of frames – thrashing-***Case Study on Redis page replacement approach.***

CO5: apply file management and I/O management techniques. **L:6, T:4**

File concept – Access methods – directory and disk structure – file system mounting –

protection – File system implementation: Directory implementation – Allocation methods – Free space management. Disk scheduling – Algorithms: FCFS, SSTF, SCAN, CSCAN, LOOK, CLOOK – disk management.

Course Code	PROFESSIONAL ETHICS AND HUMAN VALUES	L	T	P	E	C
23GN05C	(Common to all B.E. / B.Tech. Degree Programmes)	2	0	0	0	2

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

CO1: Recognize and practice the core human values and theories related to ethical behavior.
CO2: Analyze the engineering ethical breach from past study.
CO3: Distinguish and apply safety, responsibility and rights in workplaces.

CO1: Recognize and practice the core human values and theories related to ethical behavior **L: 10**

Moral dilemmas and moral autonomy - Kohlberg's theory - Gilligan's theory - Consensus and controversy –Case studies: Vigil mechanism, Whistle blowing - Protected disclosures - Personal ethics, work ethics and human values - Governing Regulation.

CO2 : Analyze the engineering ethical breach from past study **L: 10**

Engineering as experimentation - engineers as responsible experimenters - codes of ethics - a balanced outlook on law - Case study: The challenger disaster

CO3 : Distinguish and apply safety, responsibility and rights in workplaces **L: 10**

Safety and risk - assessment of safety and risk - risk benefit analysis and reducing risk - Collegiality and loyalty - respect for authority – confidentiality; Collective bargaining, Conflicts of interest - Case study; Occupational crime - professional rights - employee rights - Intellectual Property Rights (IPR) - discrimination. Case studies: The Three mile island and Chernobyl disaster

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: perform basic probability concepts and standard distributions.
CO2: find the correlation and regression of two dimensional random variables.
CO3: calculate the various measures of dispersion.
CO4: apply the concept of testing of hypothesis for small and large samples.
CO5: apply the basic concepts of classifications of design of experiments.

CO1:perform basic probability concepts and standard distributions

Discrete and continuous random variables - Moments - Moment generating functions and their properties. Binomial, Poisson, Geometric, Uniform, Exponential, Gamma, and Normal distributions. **L:9,T:3**

CO2: find the correlation and regression of two dimensional random variables

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and regression - Transformation of random variables – Central Limit Theorem. **L:9,T:3**

CO3: calculate the various measures of dispersion

Central tendencies - Mean, median, mode - Measures of Dispersion–Mean deviation, and Quartile deviation -Moments – Skewness –Kurtosis - Correlation and Regression. **L:9,T:3**

CO4: apply the concept of testing of hypothesis for small and large samples

Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means - Tests based on t and Chi-square distribution - Contingency table for independent of attributes – Goodness of fit. **L:9,T:3**

CO5: apply the basic concepts of classifications of design of experiments

Tests based on F distributions for mean, variance and proportion- One way and two way classifications - Completely randomized design – Randomized block design– Latin square design – 2^2 factorial design. **L:9,T:3**

Course Code	COMPUTER NETWORKS	L	T	P	E	C
23CS35C	(Common to CSE, IT)	3	0	2	0	4

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: analyze the functionalities of various layers and network components

CO2: evaluate various access control mechanisms for error free data communication.

CO3: apply various flow, congestion control and routing algorithms for optimal path detection

CO4: analyze the performance of various application layer protocols

Practical Component

CO5: design different network topologies using network simulation tool.

CO6: implement the various services of the data link and network layer.

CO7: demonstrate the protocols in application layer

CO1: analyze the functionalities of various layers and network components **L:9;**

Introduction– Networks Types – connection-transfer modes-Network Components: Devices and medium - Topology – Protocol Layering – TCP/IP protocol suite –OSI Model - Switching Networks – Network operating system: modes of operation **P:6**

CO5: design different network topologies using network simulation tool

Representing a network- configure a network switch – Network troubleshooting Commands- implement basic connectivity

CO2: evaluate various access control mechanisms for error free data communication. **L:12; P:8**

Data Link Layer – Framing – Flow control – Error control – Data Link Layer Protocols

and standards – HDLC –PPP - Ethernet Basics-Media Access Control: Addresses-CSMA/CA-CSMA/CD – Virtual LAN – Wireless LAN (IEEE802.11).

CO6: implement the various services of the data link and network layer.

Implementation of Error Detection Techniques and framing methods-simulation of VLAN

CO3: apply various flow, congestion control and routing algorithms for optimal path detection **L:15; P:10**

Introduction - IPV4 Addresses –CIDR - Address Mapping - ARP, RARP, and DHCP-ICMP-NAT- IPv6 Addresses -Transition from IPV4 to IPV6 - Distance Vector Routing: RIP - Link State Routing: OSPF-TCP- Congestion control - Congestion avoidance-UDP-Datagram -Services- Applications.

CO6: implement the various services of the data link and network layer

Configuration of router interfaces -Demonstrate the ARP & RARP process in local and remote network-Implement routing protocols

CO4: analyze the performance of various application layer protocols **L:9; P:6**

Introduction to Sockets - Application Layer protocols: HTTP – FTP – Email protocols (SMTP - POP3 - MIME) – DNS – SNMP.

CO7: demonstrate the protocols in application layer

analyze the network traffic - Implement Chat application

Course Code		L	T	P	E	C
23GN04C	**APTITUDE EXCELLENCE**	**0**	**0**	**2**	**0**	**1**

COURSE OUTCOMES

Upon the completion of the course the students will be able to

CO1: Infer appropriate methods to simplify computation

CO2: Develop problem solving skills on Time and Work and enhance arithmetic ability

CO3: Interpret fundamentals in quantitative techniques and solve problems quickly

CO4: Improve quantitative skills and solve problems on permutation and Combination

CO5: Acquire the knowledge of Cognitive ability and solve puzzles effectively

CO1: Infer appropriate methods to simplify computation

Simplification: Nested Series simplification(fraction) -BODMAS rule –Viraculum (or Bar) rule – Modulus of a real number –Multiplication shortcuts-Comparing Fractions-Data Sufficiency **P:6**

CO2: Develop problem solving skills on Time and Work and enhance arithmetic ability

Time and Work: Work Done - Days from Work:- Ratio – Efficiency –Work and wages - Data Sufficiency **P:6**

CO3: Interpret fundamentals in quantitative techniques and solve problems quickly

Time Speed Distance: Body moving in the same direction- Body moving in the opposite direction-Average speed- Meeting point- Data Sufficiency **P:6**

CO4: Improve quantitative skills and solve problems on permutation and Combination

Probability Permutation Combination: Fundamental Counting Principle – Computing Permutation – Circular Permutation – ComputingCombinations- Data Sufficiency **P:6**

CO5: Acquire the knowledge of Cognitive ability and solve puzzles effectively

Abstract reasoning: Mirror and water image – Figure Matrix –Pattern Completion – Logical puzzles –Dot situation - Ranking ordering.**Cognitive ability:** Blood Relation - Direction Sense Test-Data Sufficiency **P:6**

23CS36C	(Common to CSE&IT)	**0**	**0**	**4**	**0**	**2**

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Practical Component

CO1: develop suitable sorting, searching, linear and nonlinear data structures for efficient data handling.

CO2: perform hierarchical searching problems using hash, heaps and graph algorithms.

CO1: develop suitable sorting, searching, linear and nonlinear data structures for efficient data handling. **P:40**

1. Implementation of Sorting and searching for various applications.
2. Implementation of Stack and Queue using Array and Linked List.
3. Applications of stack, Queue and Linked List.
4. Construction of Expression Tree.
5. Implementation of Binary Search Tree.
6. Implementation of Dictionary operations using AVL Tree.

Mini project

CO2: perform hierarchical searching problems using hash, heaps and graph algorithms. **P:20**

1. Implementation of Priority Queue using Heap structures.
2. Applications of Hashing techniques.
3. Applications of Graph algorithms.

Mini project

Software Requirements

- GNU C/C++ Compiler
- OS - Linux

P: 60; TOTAL: 60 PERIODS

Course Code	**LINUX SYSTEM ADMINISTRATION**	**L**	**T**	**P**	**E**	**C**
23CS37C	(Common to CSE, IT and AI&DS)	**0**	**0**	**2**	**0**	**1**

COURSE OUTCOMES

Upon completion of this course, the students will be able to

CO1:demonstrate the basic knowledge of Linux commands and file handling utilities by using Linux shell environment

CO2:implement Shell Scripting

LIST OF EXPERIMENTS

Explore the LINUX Commands **P:6**

a. Directory
b. File Manipulation

c. General-purpose
d. Network utilities
e. Disk utilities
f. Backup utilities and Filters

Shell Programming - Develop Shell script programs for the following: **P:10**

a. Interactive shell script
b. Positional parameters
c. Arithmetic
d. If-then-fi, if-then-else-fi, & nested if-else
e. Logical operators
f. Else + if equals elif, case structure
g. While & for loop
h. Meta characters

Shell scripting for - Real world problem solving **P:14**

a. File Backup
b. Text File Search
c. Password Generator
d. Disk Cleanup
e. Memory Leak Detection
f. Cache Management
g. Swap Space Optimization

SOFTWARE REQUIREMENTS

Operating System: Linux (Ubuntu).

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Experiential Component

CO1: Survey and practice the basic elements of existing patents.

CO2: Investigate and present the state of art technologies through effectual IP search.

Soft Skill Component

CO3: Present patent survey conclusions

CO1 Survey and practice basic elements of existing patents 30

Basic elements of IPR – claims – infringements – Patent examination and Report - Case studies: patent survey.

CO2 Investigate and present the state of art technologies through effectual IP search 30

Importance of IP search-factors to be considered for effective IP search-Hands-on Practice

Course Code	JAVAFOR DEVELOPERS	L	T	P	E	C
23CS41C/ 23IT41C	(**Common to CSE, IT Degree Programmes)**	3	0	0	0	3

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Components:

CO1: employ object-oriented language principles to solve known applications (CDL1)
CO2: apply string handling, I/O streams and exception handling methods for developing text based applications(CDL1)
CO3: apply the principles of multithreading and collections to solve complex problems (CDL2)
CO4: explore Maven, Gradle and REST API for project management (CDL3)
CO5:build robust and efficient enterprise and web applications using Spring Boot.(CDL3)

CO1: employ object-oriented language principles to solve known applications. L:10

Introduction to Java – OOPS Concepts: Classes and Objects – Methods – Inheritance – Polymorphism – Constructors– Abstract class and Interface - Packages and Access Modifiers

CO2: apply string handling, I/O streams and exception handling methods for developing text based applications L:8

Arrays - String Handling: Immutable – Comparison – StringBuffer and StringBuilder - String Tokenizer - File Handling: I/O Stream – Buffered Reader/Writer – Exception Handling – Built in and Custom Exception

CO3: apply the principles of multithreading and collections to solve complex problems **L:9**

Multithreading: Thread Life Cycle –Thread Creation – Thread Priorities – Synchronization - Collections Framework: Collection Class – List – Queue – Map – Set – SortedSet – Deque – Comparator – Iterator in Java.

CO4: explore Maven, Gradle and REST API for project management **L: 7**

Maven: POM.XML, Maven Repositories- Gradle : Repositories and plugins – REST API – HTTP Requests and Responses – Annotations – Lombok

CO5: build robust and efficient enterprise and web applications using Spring Boot **L:11**

Spring Core Framework – Features – Dependency Management –Spring Data –Spring Boot – JDBC Overview & Architecture –JDBC Driver Types–CRUD Operations – JPA – RESTful web services with Spring Boot.

L: 45; TOTAL: 45 PERIODS

Course Code	CRYPTOGRAPHY AND CYBER SECURITY	L	T	P	E	C
23CS42C		3	0	0	0	3

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: recognize the basic mathematical concepts required for symmetric and asymmetric fields. (CDL1)

CO2: apply classical and modern cryptographic basic for secure communication in data transformation. (CDL1)

CO3: apply various symmetric and asymmetric algorithm for data encryption. (CDL2)

CO4: employ various hashing and authentication schemes for different applications. (CDL2)

CO5: analyze various attacks and its effects in cyber security.(CDL1)

CO1: recognize the basic mathematical concepts required for symmetric and a symmetric fields **L:9**

Number theory – Modular Arithmetic - Euclid's algorithm – Congruence – Group, Rings, Fields, Finite Fields - Primes – Primality Testing – Euler's totient function, Fermat's and Euler's Theorem – Chinese Remainder Theorem – Exponentiation and logarithm.

CO2: apply classical and modern cryptographic basic for secure communication in data transformation **L:9**

Computer Security Concepts – Security Attacks – Security Services and Mechanisms – Classical encryption techniques: Substitution techniques, Transposition techniques – Foundations of modern cryptography: Perfect security – Information Theory - Shannon's theorem – Product Cryptosystem – Cryptanalysis.

CO3: apply various symmetric and asymmetric algorithm for data encryption **L:9**

Symmetric Key Algorithms: Stream and Block Ciphers - Data Encryption Standards (DES) Advanced Encryption Standard (AES) - Linear Cryptanalysis - Differential Cryptanalysis - Asymmetric Key Algorithms: Rivest Shamir Adleman (RSA) algorithm – Elliptic Curve Cryptography (ECC).

CO4: employ various hashing and authentication schemes for different applications **L:9**

Cryptographic Hash functions: Message Digest 5(MD5) – Secure Hash Algorithm (SHA512) – Message Authentication Code (MAC): HMAC – CMAC - Digital signatures - Diffie Hellman key Exchange - Authentication Applications: Kerberos-X.509 Authentication Service - Public key infrastructure.

CO5: analyze various attacks and its effects in cyber security **L:9**

Cyber Security – Classification – Threads and Attacks: Password Cracking – Keyloggers Spywares - SQL Injection – Session Hijacking – Spoofing – Sniffing - Backdoor Trojan – Cross Site Scripting.

Course code	**EMBEDDED SYSTEMS**	**L**	**T**	**P**	**E**	**C**
23CS43C		**3**	**0**	**0**	**0**	**3**

COURSE OUTCOMES

Upon completion of this course, the students will be able to

Theory Components:

CO1: Relate the components of an Embedded System. (CDL 1)

CO2: Utilize the peripherals of LPC2148 microcontroller. (CDL 1)

CO3: Implement a basic interface program for the LPC2148 peripherals. (CDL 2)

CO4: Analyze the programming fundamentals of Arduino UNO. (CDL 2)

CO5: Implement a basic interface program in Python using the Raspberry Pi. (CDL 2)

Softskill Component:

CO6: Proficient to work effectively as an individual and in multidisciplinary teams. (PDL 3)

CO1: Relate the components of an Embedded System L:9

Definition: Embedded system, Intelligent System, Expert system – software architecture, hardware Architecture; Embedded System design process–types and comparison- Embedded System design examples: Modern train controller design, Elevator controller design.

CO2:Utilize the peripherals of LPC2148 microcontroller L:9

Functional Block diagram - internal peripherals: GPIO, UART, PWM and ADC- On chip organization of I2C and SPI.

CO3: Implement a basic interface program for the LPC2148 peripherals L:9

Introduction to ARM programming environment- Interfacing program for LEDs and Switches -Serial IO interfacing (UART) – LCD interface -Motor Interfacing

CO4: Analyze the programming fundamentals of Arduino UNO L:9

Arduino IDE Overview-Operators in Arduino – Function Libraries – Control Statement – Loops – Arrays – String - Math library - Random Number – Interrupts -Sensor Interface examples with Arduino. Case Study: Traffic Control System.

CO5: Implement a basic interface program in Python using the Raspberry Pi L:9

Installing Python - Python Data Types - Variables – Working with loops - Control flow statements - Functions-classes - Controlling LED using Raspberry pi - Interfacing LED and Switch with Raspberry pi - IR Sensor and Buzzer Interfacing-Ultrasonic Sensor Interfacing - Relay Interfacing.

L: 45; TOTAL: 45 PERIODS

Course code	ENVIRONMENTAL SCIENCE AND ENGINEERING	L	T	P	E	C
23MC02C		2	0	0	0	0

COURSE OUTCOMES:

Upon the successful completion of the course, the student will be able to

CO1: explain the structure and functions of an ecosystem and the importance of biodiversity.

CO2: interpret the causes, effects of air and water pollution.

CO3: comprehend the causes, impacts and management of e-waste and municipal waste.

CO4: apply the knowledge of sustainability practices in the environment.

CO1: explain the structure and functions of an ecosystem and the importance of biodiversity. **L-6**

Introduction to Environment**,** scope and importance of environment – need for public awareness. Eco-system: structure and function. Biodiversity: Introduction - types – values of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India. Conservation of biodiversity: In-situ and ex-situ - Biodiversity index calculation (Simpson and Shannon diversity Index, Sorenson coefficient)

CO2: interpret the causes, effects of air and water pollution. **L-6**

Air pollution - Classification of air pollutants – sources – Effects - Measurements: dust monitor – gas analyzer, particle size analyzer. Water pollution – Classification – health hazards – sampling and analysis of water. Waste water treatment – different industrial effluents and their treatment – Measurement: BOD and COD – atomic absorption spectrometer. Case study (Okhla sewage water treatment plant)

CO3: comprehend the causes, impacts and management of e-waste and municipal waste. **L-12**

Integrated Waste Management: Introduction – Generation and types of solid waste – Swachh Bharat Mission – Solid waste management: collection, transportation, segregation and processing – Disposal: landfill – biochemical processes and energy recovery - Municipal solid waste management rules 2016.

e-Waste Management: Introduction – Composition - Types – Generation – Environmental and health hazards of e-waste – Recycling - Recovery of metals: pyrometallurgical, hydrometallurgical, and biometallurgical process – e-waste management and handling rules 2016 – e-waste management companies in India.

CO4: apply the knowledge of sustainability practices in the environment. **L-6**

Sustainability and Management**:** Introduction - concept, needs and challenges –economic and social aspects of sustainability – unsustainability to sustainability –millennium development goals and protocols – Sustainable Development Goals-targets, indicators and intervention areas – Climate change – Global, Regional and local environmental issues and possible solutions – case studies. Concept of Carbon Credit – Carbon Footprint – Environmental management in industry – A case study – Zero waste and R concept – Circular economy – ISO 14000 Series – Material Life cycle assessment.

L:30; TOTAL : 30 PERIODS

Course Code	DESIGN AND ANALYSIS OF ALGORITHMS	L	T	P	E	C
23CS44C / 23IT44C	(Common to CSE, IT Degree Programmes)	3	0	2	0	4

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Components

CO1: apply algorithmic analysis techniques to evaluate the efficiency of algorithms in terms of time and space complexities.

CO2: analyze algorithmic design using divide and conquer/greedy approach to solve complex problems.

CO3: derive optimal solutions for complex problems using dynamic programming.

CO4: use branch and bound and backtracking strategies along with the state space tree method to solve complex problems.

CO5: apply polynomial time algorithms to solve problems efficiently within reasonable time bounds.

Practical Component

CO6: design and implement efficient algorithms to produce optimal solutions for solving real world use cases.

CO1: apply algorithmic analysis techniques to evaluate the efficiency of algorithms in terms of time and space complexities **L:10 P:3**

Notion of an Algorithm - Time and Space Complexity - Asymptotic notation and its properties - Recurrence Relations - The substitution method for solving recurrences - The master method for solving recurrences - Algorithm Analysis: Sorting Techniques - Towers of Hanoi, Sieve of Eratosthenes

CO6: design and implement efficient algorithms to produce optimal solutions for solving real world use cases.

Implement sorting algorithms and recursive algorithms.

CO2: analyze algorithmic design using divide and conquer/greedy approach to solve complex problems **L:9 P: 8**

Divide-and-Conquer: Introduction - Algorithm Analysis: Binary Search, Merge sort, Quick sort - Strassen's algorithm for matrix multiplication - Closest pair of points - Randomized Quick Sort.

Greedy Method: Introduction - Activity Selection Problem - Huffman Trees - Minimum spanning tree: Prim's and Kruskal's - Knapsack problem

CO6: design and implement efficient algorithms to produce optimal solutions for solving real world use cases.

Solve problems using divide and conquer / greedy approaches.

CO3:derive optimal solutions for complex problems using dynamic programming **L:10**

Approaches of dynamic programming - Principle of Optimality - Computing Binomial Coefficient - Multi-stage graph - Floyd-Warshall algorithm - Matrix chain multiplication - 0/1 Knapsack problem - Optimal binary search tree - Longest common subsequence. **P: 8**

CO6: design and implement efficient algorithms to produce optimal solutions for solving real world use cases.

Solve problems using dynamic programming approach.

CO4: use branch and bound and backtracking strategies along with the state space tree method to solve complex problems **L:9 P: 8**

Back tracking: Introduction to backtracking - N-Queens Problem - Hamiltonian Circuit Problem - Graph coloring problem - Knight's tour Problem.

Branch and Bound: Introduction - Classification of Branch and Bound Problems: FIFO, LIFO, LC - 0/1 Knapsack problem - Solving 8-Puzzle problem

CO6: design and implement efficient algorithms to produce optimal solutions for solving real world use cases.

Solve problems using branch & bound and backtracking approaches.

CO5: apply polynomial time algorithms to solve problems efficiently within reasonable time bounds **L:7 P: 3**

Tractable and Intractable Problems - Complexity Classes - NP hardness: Clique decision problem - NP Completeness - Concept of Cooks Theorem - Proof of NP Completeness: CNF-SAT, Vertex Cover, Subset-Sum Problem

CO6: design and implement efficient algorithms to produce optimal solutions for solving real world use cases.

Solve NP hard and NP complete problems using suitable approaches.

L: 45; P:30; TOTAL: 75 PERIODS

Course Code	DATABASE MANAGEMENT SYSTEMS	L	T	P	E	C
23CS45C / 23IT45C	(Common to CSE,IT and AI&DS Degree Programmes)	3	0	2	0	4

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Components:

CO1: design ER model and apply the SQL concepts to perform various operations in a relational database (CDL2)

CO2: apply normalization concept to remodel the database and maintain consistency with suitable transaction management. (CDL2)

CO3: apply the intermediate query concept to retrieve data from multiple relations. (CDL2)

CO4: apply PL/SQL constructs to enhance the database activities and develop application using database connectivity drivers. (CDL2)

CO5: apply the query evaluation plan and optimize the query to reduce complexity. (CDL1)

Practical Components:

CO6: demonstrate database normalization using appropriate tool for enhancing data integrity (PDL2**)**

CO7: design and implement SQL queries for data manipulation. (PDL2)

CO8: build applications using database connectivity drivers and implement programming concepts using PL/SQL constructs. (PDL2)

CO9: demonstrate indexing and partitioning concepts using Common Table Expression. (PDL1)

CO1: design ER model and apply the SQL concepts to perform various operations in a relational database

CO2: apply normalization concept to remodel the database and maintain consistency with suitable transaction management.

CO6: demonstrate database normalization using appropriate tool for enhancing data integrity

L:19; P:8

Introduction to Database System-Views of data - Database System Architecture – ER Models – Enhanced-ER Model - Relational Model- ER-to-Relational Mapping. SQL: Keys - DDL Statements - DML Statements – DCL & TCL Statements - SQL Aggregate Functions.

Functional Dependencies –Non loss Decomposition–Normalization: First, Second, Third Normal Forms, Dependency Preservation –Boyce/Codd Normal Form. Denormalization Techniques: Horizontal, Vertical and Mixed. Transaction: Basic Concepts -Transaction

Recovery –ACID Properties - Concurrency – Deadlock
Develop Database Design using ER Diagram and Perform Database Manipulations operations using DDL, DML, TCL and DCL commands.Perform normalization for the given schema using appropriate tool.

CO3:apply the intermediate query concept to retrieve data from multiple relations **L:8;**
CO7: design and implement SQL queries for data manipulation **P:7**

SQL Clauses - Group By – Having - Sub Query – Nested Sub Query -Null Functions – Indexes - Sequences – SQL Joins - Types – Views - SQL Injections - SQL Window functions -Types: Aggregate- Value- Ranking

Writing SQL Queries to retrieve data from multiple relations.

CO4: implement PL/SQL constructs to enhance the database activities and develop application using database connectivity drivers. **L:9; P:10**
CO8: build applications using database connectivity drivers and implement programming concepts using PL/SQL constructs.

PL/SQL Introduction - Control statements –Procedures - Functions – Cursors – Triggers – Exceptions – Embedded SQL - ODBC Connectivity- Case Study: CRUD operations in Industry specific application.

Develop PL/SQL Programs to demonstrate the concept of Control statements –Procedures - Functions – Cursors – Triggers – Exceptions.
Develop application to perform CRUD operations using ODBC connectivity.

CO5: apply the query evaluation plan and optimize the query to reduce complexity. **L:9;**
CO9: demonstrate indexing and partitioning concepts using Common Table Expression. **P:5**

Query Processing: Parsing and Translation, Optimization, Evaluation; Measures of Query Cost. Query Optimization: Query Evaluation Plan (QEP), cost based query optimization, Estimation of QEP cost. Indexing concepts– CTE– Partitioning.

Create indexing and implement partitioning concepts using Common Table Expression (CTE) for the given schema.

WEB REFERENCE

"Introduction to Database Systems" -NPTEL Course.

L:45; P:30; TOTAL: 75 PERIODS

Course Code	JAVA PROGRAMMING LABORATORY	L	T	P	E	C
23CS46C / 23IT46C	(Common to CSE, IT Degree Programmes)	0	0	2	2	2

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Practical Components:

CO1: develop modular and scalable programs by applying object-oriented programming concepts for different scenarios. (PDL2)

CO2: build simple and robust applications using Spring Boot (PDL2)

Experiential Component:

CO3: synthesize and articulate the ideas and experiences for solving known applications(PDL3)

Soft Skill Component:

CO4: function effectively in heterogeneous teams through the knowledge of team work, Inter-personal relationships, conflict management and leadership quality

List of Experiments

CO1: develop modular and scalable programs by applying object-oriented programming concepts for different scenarios. (PDL2) **P: 20; E:10**

1. Implementation of OOPS concepts.
2. Exercises on abstract class, interfaces and package concepts.
3. Exercises on array and string manipulation
4. Exercises on file and exception handling.
5. Implementation of Multithreading concept
6. Implementation of collection classes.

CO2: build simple and robust applications using Spring Boot (PDL2) **P: 10; E:20**

1. Implementation of Spring Boot with JPA.
2. Mini Project

SOFTWARE REQUIREMENTS

- Front end: JAVA, IDE: Net beans / Eclipse
- Back end: Oracle

TEXT BOOKS:

1. Kathy Sierra, Bert Bates, Trisha Gee, "Head First Java – A Learner's Guide to Real World Programming", 3rd Edition, O'Reilly Media, Inc., May 2022.
2. Craig Walls, "Spring in Action", 6th Edition, Manning Publications, January 2022

REFERENCE BOOKS:

1. Herbert Schildt, "Java: The Complete Reference", 13th Edition, McGraw Hill, 2024.

2. Kishori Sharan, Peter Spath, "Learn JavaFX 17: Building User Experience and Interfaces with Java", 2nd Edition, APress, 2022.
3. Maurice Naftalin, Philip Wadler, "Java Generics and Collections", 2nd Edition, O'Reilly Media, Inc., June 2024.
4. Cay S.Horstmann, "Core Java, Volume I: Fundamentals", 12th Edition, Oracle Press, December 2021.

P:30; E:30; TOTAL:60 PERIODS

Course Code	MODELING PROJECTS	L	T	P	E	C
23CS47C/ 23IT47C/ 23AD46C	(Common to CSE,IT & AIDS Degree Programmes)	0	0	2	2	2

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Practical Component:

CO1: apply different methods to translate the approaches for solving problems into robust computational models. (PDL3)

CO2: validate the model in end user's perspectives and adopt the implications to summarize the optimal method for solving the problem (CDL3)

CO3: explore and synthesize system requirements from larger social and professional concerns and able to develop software requirement specifications (CDL3)

Experiential Component:

CO4: develop, calibrate and demonstrate a prototype model and eventually present model findings in a way that is appealing to real world (PDL3)

Soft Skill Component

CO5: organize efficient and effective communication with the peers and engage in the modeling project with a high degree of independence and responsibility to exhibiting team work

CO1: apply different methods to translate the approaches for solving problems into robust computational models

The goal of the Modelling project is to learn principles and methodologies of project prototype development in a real-world context with a project team of 2 to 3 students. Some teams will have the opportunity to work with students from multiple disciplines. **P:8**

- **Task 01:Reframe / Refine the idea proposed during design thinking practice or identify new problem** and prepare a one page project proposal
- **Task 02: Proposal Presentation and review – I**

CO2: validate the model in end user's perspectives and adopt the implications to summarize the optimal method for solving the problem **P:7**

- **Task 03: Translating customer and user needs information into specifications**
- **Task 04: Project Proposal and Specifications.**

A written proposal including background information and objectives to be submit. It will be evaluated on content, completeness, and clarity.

CO3:explore and synthesize system requirements from larger social and professional concerns and able to develop software requirement specifications

- **Task 05: Review – II (Project Proposal)** **P:7**
- **Task 06: Systems Requirements**

CO4:develop, calibrate and demonstrate a prototype model and eventually present model findings in a way that is appealing to real world

- **Task 07: Review – III (System Requirements)**
- **Task 08:PrototypeDesign**
  - User Interface Design
  - Conversion Strategy

  E:30
- **Task 09**: **Review – IV (Prototype Design)**

- **Task 10**: **Project Document Submission**

P:30; E:30; TOTAL:60 PERIODS

L: 30; P: 30; TOTAL: 60 PERIODS

Course Code	FOUNDATIONS OF OBJECT ORIENTED	L	T	P	E	C
23CS02N	PROGRAMMING	2	0	2	0	3

COURSE OUTCOMES

Upon the successful completion of the course, the student will be able to

Theory Component

CO1: explore the constructs of object oriented program(CDL1)
CO2: apply constructor and overloading mechanisms to simple application (CDL1)
CO3: employee code reusability through inheritance and polymorphism (CDL1)
CO4: develop real-world applications by using files, streams, and exceptions (CDL2)
CO5: construct well-defined, efficient data handling strategies using templates and STL (CDL1)

Practical Component

CO6: implement the basic object oriented principles such as class, objects, and constructors (PDL1)
CO7: establish code reusability through inheritance and polymorphism (PDL1)
CO8: solve problems using templates, STL, files and exception handling (PDL1)

CO1: explore the constructs of object oriented program **L:6; P:6**

Introduction to OOPs - Applications of OOP - Structure of C++ - Program - C++ Basics: Keywords – Constants - Data Types - Dynamic Initialization of Variables – Reference Variables - Operators in C++ - C++ Class Overview: Class Definition Objects – Class Members - Access Control – Scope Resolution operator – Inline Function - Friend Functions - static class members.

CO2: apply constructor and overloading mechanisms to simple programs **L:6;**
CO6: implement the basic object oriented principles such as class, objects, and constructors **P:6**

Constructors: Parameterized Constructors - Multiple Constructors in a Class – Constructors with Default Arguments - Dynamic initialization of Objects - Copy Constructors – Dynamic Constructors - Destructors - Function Overloading - Operator overloading - Rules for Operator overloading - overloading of binary and unary operators.

CO3: employe code reusability through inheritance and polymorphism **L:6;**
CO7: establish code reusability through inheritance and polymorphism **P:6**

Introduction to inheritance - Defining Derived Classes - Single Inheritance – Multiple Inheritance - Multi-Level Inheritance - Hierarchical Inheritance - Hybrid Inheritance - Virtual Base Classes - Abstract Classes - Constructors in Derived Classes – Introduction to pointers - Pointers to Objects - Virtual Functions - Pure Virtual Functions – Virtual

Destructors.

CO4: develop real-world applications by using files, streams, and exceptions **L:6; P:6**

Files in C++: File handling in C++ - File I/O - Formatted and Unformatted I/O - Basics of Exception Handling, Types of exceptions - Exception Handing Mechanism - Throwing and Catching Mechanism.

CO5:construct well-defined, efficient data handling strategies using templates and STL **L:6; P:6**

CO8: solve problems using templates, STL, files and exception handling

Class Templates - Class Templates with Multiple Parameters - Function Templates, Function Templates with Multiple Parameters –Member Function Templates - STL.

L: 30; P:30; TOTAL: 60 PERIODS

Course Code	LINEAR ALGEBRA, MATHEMATICAL LOGIC AND SET THEORY	L	T	P	E	C
23SH01E		2	1	0	0	3

COURSE OUTCOMES:

Upon successfully completing the course, the students will be able to:

CO1: analyze concepts of vector spaces. (CDL 1)

CO2: measure the similarity between different datasets using Inner product spaces. (CDL 1)

CO3: decompose the matrix for computational convenience. (CDL 1)

CO4: illustrate the validity of the arguments. (CDL 1)

CO5**:** analyze the concepts of Sets, Relations and Functions. (CDL 1)

CO1: analyze concepts of vector spaces **L:6 T:3**

Vector spaces – Subspaces – Linear combinations – linear span - Linear independence and linear dependence – Bases and dimensions.

CO2: measure the similarity between different datasets using Inner product spaces **L:6 T:3**

Linear transformation - Null spaces and ranges – Rank Nullity theorem - Matrix representation of a linear transformations - Inner product space - Norms - Orthonormal Vectors - Gram Schmidt orthogonalisation process**.**

CO3: decompose the matrix for computational convenience **L:6 T:3**

Generalized eigenvector - QR decomposition- generalized inverse - Singular value decomposition and applications – Pseudo Inverse .

CO4: illustrate the validity of the arguments. **L:6**

Propositional Logic – Equivalences and Implications – Normal forms – Predicate Calculus and Quantifiers - Rules of inference – Proof methods and Strategies - Forward Proof, Proof by Contradiction, Proof by Contraposition, Proof of Necessity and Sufficiency. **T:3**

CO5: analyze the concepts of Sets, Relations and Functions

Basic Definitions - Set operations – Laws of set theory – Relations – Properties of relations - Partial Ordering Relation - Equivalence Relation - Matrices of relations - Closure of relations – Functions – Bijective functions - Inverse and Compositions of functions. **L:6 T:3**

4. Seymour Lipschutz Marc Lipson., "Linear Algebra" Schaum's Out lines series, 6th Edition, McGraw – Hill Education, 2018.

L : 30; T :15; TOTAL : 45 PERIODS

Course Code	LINEAR STRUCTURES AND TRANSFORMATIONS	L	T	P	E	C
23SH02E		2	1	0	0	3

COURSE OUTCOMES:

Upon successfully completing the course, the students will be able to:

CO1: solve the linear system of equations. (CDL 1)

CO2: determine the dimension of vector spaces. (CDL 1)

CO3: find the orthonormal vectors using Inner product spaces. (CDL 1)

CO4: illustrate Jordan canonical form on a finite dimensional vector space. (CDL 1)

CO5:decompose the matrix using Generalized Eigen vectors for computation.(CDL 1)

CO 1: solve the linear system of equations **L:6 T:3**

General system of linear equations – Matrices– Echelon form of matrix- Solving linear systems- Consistency of a system of linear equations -LU factorization.

CO2: determine the dimension of vector spaces

Vector spaces – Subspaces – Linear combinations – linear span - Linear independence and linear dependence – Bases and dimensions. **L:6 T:3**

CO3: find the orthonormal vectors using Inner product spaces

Linear transformation - Null spaces and ranges – Rank Nullity Theorem - Matrix representation of a lineartransformations - Inner product space - Norms - Orthonormal **L:6 T:3**

Vectors - Gram Schmidt orthogonalisation process.

CO4: illustrate Jordan canonical form on a finite dimensional vector space

Generalized eigenvector- Chains- Canonical basis the minimum polynomial- - Algebraic and Geometric multiplicity of Eigen Values - Similar matrices-Modal matrix-Jordan canonical form. **L:6 T:3**

CO5: decompose the matrix using Generalized Eigen vectors for computation

Eigen-values using QR transformations – Generalized Inverse Eigen vectors – Canonical forms – Singular value decomposition and applications – Pseudo inverse **L:6 T:3**

TEXT BOOKS

L : 30; T :15; TOTAL : 45 PERIODS

Course Code		**L**	**T**	**P**	**E**	**C**
23SH03E	**NUMBER THEORY**	**2**	**1**	**0**	**0**	**3**

COURSE OUTCOMES:

Upon successfully completing the course, the students will be able to:

CO1: acquire the concepts of theory of numbers. (CDL 1)

CO2: apply the fundamental propositions to interpret solutions of congruence. (CDL 1)

CO3: find the primitive roots for the congruence. (CDL 1)

CO4: analyze the inter-relation between arithmetical functions. (CDL 1)

CO5: determine quadratic residues of congruence. (CDL 1)

CO1 : acquire the concepts of theory of numbers

Introduction – Divisibility- Greatest common divisor - Prime numbers - The fundamental theorem of arithmetic - The series of reciprocals of the primes - The Euclidean algorithm(without Proof) - The greatest common divisor of more than two numbers. **L:6 T:3**

CO2 : apply the fundamental propositions to interpret solutions of congruence

Congruence - Linear congruence - Euler-Fermat theorem - Polynomial congruence modulo p – Wilson's Theorem **L:6 T:3**

CO3: analyze the inter-relation between arithmetical functions.

The Mobius function $\mu(n)$ – The Euler Totient function $\varphi(n)$– A relation connecting φ and μ – A product formula for $\varphi(n)$ – properties of $\varphi(n)$ –Multiplicative functions– **L:6 T:3**

completely multiplicative function.

CO4: determine quadratic residues of congruence

Quadratic Residues – Legendre's symbol and its properties – Evaluation of (-1|p) and (2|p) – Gauss lemma – The Quadratic Reciprocity law – Applications – The Jacobi symbol. **L:6 T:3**

CO5: implement the concepts of congruence in cryptography

Chinese remainder theorem - Applications of Chinese remainder theorem - Cryptography and its application – RSA algorithm and Rabin Cryptosystem. **L:6 T:3**

L : 30; T :15; TOTAL : 45 PERIODS

Course Code		L	T	P	E	C
23SH04E	**NUMERICAL ANALYSIS**	**2**	**1**	**0**	**0**	**3**

COURSE OUTCOMES:

Upon successfully completing the course, the students will be able to:

CO1: solve algebraic and transcendental equations using numerical methods. (CDL 1)

CO2: interpolate and approximate the polynomial of data. (CDL 1)

CO3: perform numerical differentiation and integration. (CDL 1)

CO4: find numerical solution of ordinary differential equation. (CDL 1)

CO5: classify and find numerical solution of partial differential equations. (CDL 1)

CO 1: solve algebraic and transcendental equations using numerical methods

Solutions of Algebraic linear equations Newton - Raphson Method, Fixed Point Iteration method - Solutions of algebraic simultaneous linear equations - Gauss Elimination –Gauss Seidel Methods. **L:6 T:3**

CO 2: interpolate and approximate the polynomial of data

Curve Fitting – Method of Least Squares – Fitting a Straight Line – Fitting a Second Degree Parabola - Finite differences - Newton's Forward & Backward Difference Formulae - Central Differences - Stirling's Formula - Lagrange's Formula. **L:6 T:3**

CO 3: perform numerical differentiation and integration **L:6**

Derivatives using forward and backward difference Formulae - Trapezoidal rule - **T:3**

Simpson's rules - Double integration using Trapezoidal and Simpson's rules.

CO 4: find numerical solution of ordinary differential equation

Taylor's Series Method - Euler's Method – Runge Kutta fourth order Method – Predictor - corrector Methods - Milne's Method - Finite difference for solving ordinary differential equation. **L:6 T:3**

CO 5: classify and find numerical solution of partial differential equations

Classification of Partial Differential Equations of second order - Finite difference solution of one dimensional heat equation by explicit and implicit methods (Crank Nichelson and Bender Schmidth methods) - One dimensional wave equation and two dimensional Laplace and Poisson equations. **L:6 T:3**

Course Code		L	T	P	E	C
23SH05E	**OPTIMIZATION TECHNIQUES**	**2**	**1**	**0**	**0**	**3**

COURSE OUTCOMES:

Upon successfully completing the course, the students will be able to:

CO1: find optimum solution of linear programming problem. (CDL 1)
CO2: determine the optimum schedule for assignment and transportation problems. (CDL 1)
CO3: acquire decision making in Pure and Mixed Strategies. (CDL 1)
CO4: analyze the network for optimal schedule. (CDL 1)
CO5:compute optimum solution of non-linear programming. (CDL 1)

CO1: find optimum solution of linear programming problem

Linear Programming Problem – Mathematical Formulation of Linear Programming Problems (LPP) – Graphical Solution Method - Canonical and Standard Forms of LPP - Simplex Method - Linear Programming using Artificial Variables - Two Phase Method. **L:6 T:3**

CO2:acquire decision making in Pure and Mixed Strategies

Basic Terms in Game Theory - Two-Person Zero-Sum Games - Maximin-Minimax Principal - Games without Saddle Points - Mixed Strategies-Pure and Mixed Strategies with Saddle Point- Mixed Strategy Problems by Arithmetic Method- Graphic Solution of $2 \times n$ and $m \times 2$ Games. **L:6 T:3**

CO3: analyze the network for optimal schedule

Development of Network Analysis - Network Analysis and Rules of Network Construction - Critical Path Method (CPM) - Programme Evaluation and Review Technique (PERT). **L:6 T:3**

CO4: compute optimum solution of non – linear programming

Formulating a Non-Linear Programming Problem – Constrained Optimization with equality Constraints- Graphical Solution – Kuhn- Tucker Conditions with Non negative constraints- Quadratic Programming – Wolfe's modified Simplex method. **L:6 T:3**

CO5: solve non-linear constrained optimization

Optimization using Gradient Descent – Constrained optimization - Lagrange Multipliers - Convex optimization - Non linear Constrained Optimization. **L:6 T:3**

Course Code		L	T	P	E	C
23SH06E	**PRINCIPLES OF DISCRETE MATHEMATICS**	**2**	**1**	**0**	**0**	**3**

COURSE OUTCOMES:

Upon successfully completing the course, the students will be able to:
CO1: illustrate the validity of the arguments. (CDL 1)
CO2: analyze the concepts of Sets, Relations and Functions. (CDL 1)
CO3: perform the principles of counting and solve recurrence relations. (CDL 1)
CO4: interpret the basic concepts of graphs. (CDL 1)
CO5: compute minimum Spanning Trees and shortest route for the graph. (CDL 1)

CO1: illustrate the validity of the arguments.

Propositional Logic – Equivalences and Implications – Normal forms – Rules of inference – Proof methods and Strategies - Forward Proof, Proof by Contradiction, Proof by Contraposition, Proof of Necessity and Sufficiency. **L:6 T:3**

CO2: analyze the concepts of Sets, Relations and Functions

Basic Definitions - Set operations – Laws of set theory – Relations – Properties of relations - Equivalence Relation - Matrices of relations - Closure of relations – Functions – Bijective functions - Inverse and Compositions of functions. **L:6 T:3**

CO3: perform the principles of counting and solve recurrence relations. **L:6**

Mathematical induction - Strong induction and well ordering -The basics of counting – The pigeonhole principle - Recurrence relations – Solving linear recurrence relations – Generating functions - Inclusion and exclusion principle. **T:3**

CO4:interpret the basic concepts of graphs

Graphs and their properties - Special types of graphs – Matrix representation of graphs and graph isomorphism- Euler and Hamiltonian graphs. **L:6 T:3**

CO5: compute minimum Spanning Trees and shortest route for the graph

Trees – Some properties of Trees – Pendant vertices in a Tree – Distance and centers in a Tree – Rooted and Binary Trees - Spanning Trees- minimum spanning tree–Prim's algorithm. **L:6 T:3**

Course Code	**RANDOM PROCESSES AND QUEUEING THEORY**	**L**	**T**	**P**	**E**	**C**
23SH07E		**2**	**1**	**0**	**0**	**3**

COURSE OUTCOMES:

Upon successfully completing the course, the students will be able to:

CO1: interpret the basic characteristic features of Random processes. (CDL 1)

CO2: encapsulate the time averages of uncertain events. (CDL 1)

CO3: evaluate spectral densities of functions. (CDL 1)

CO4: analyze the characteristics of Markovian queues. (CDL 1)

CO5**:**apply the concepts of queuing theory in networks.(CDL 1)

CO1: interpret the basic characteristic features of Random processes **L:6 T:3**

Classification - Stationary process - Markov process - Markov chains - Transition probabilities.

CO2 : encapsulate the time averages of uncertain events **L:6 T:3**

Counting Process - Ergodic process - Poisson Process - Renewal Processes - Gaussian process.

CO3 :evaluate spectral densities of functions **L:6 T:3**

Auto correlation - Cross correlation – Power spectral density–Cross spectral density- Properties–Wiener – Khintchine theorem (without proof).

CO4 : analyze the characteristics of Markovian queues

Markovian models – Birth and Death Queuing models- Steady state results: Single and multiple server queuing models- queues with finite waiting rooms- Finite source models- Little's Formula. **L:6 T:3**

CO5: apply the concepts of queuing theory in networks **L:6 T:3**

M/G/1 queue- Pollaczek- Khintchine formula, series queues- open and closed networks.

L : 30; T :15; TOTAL : 45 PERIODS

Course Code	STATISTICAL TECHNIQUES AND NUMERICAL METHODS	L	T	P	E	C
23SH08E		2	1	0	0	3

COURSE OUTCOMES:

Upon successfully completing the course, the students will be able to:
CO1: calculate the various measures of dispersion. (CDL 1)
CO2: apply the principles of hypothesis testing in small and large samples. (CDL 1)
CO3: analyze the variances in design of experiments. (CDL 1)
CO4: find solution of linear equations and to perform differentiation and integration numerically. (CDL 1)
CO5: compute numerical solution of differential equations. (CDL 1)

CO1: calculate the various measures of dispersion

Central tendencies - Mean, median, mode - Measures of Dispersion –Mean deviation, and Quartile deviation–Moments– Skewness –Kurtosis - Correlation and Regression. **L:6 T:3**

CO2: apply the principles of hypothesis testing in small and large samples

Sampling distributions - Statistical hypothesis - Large sample testsbased on Normal distribution for single mean and difference of means -Tests based on t, and F distributions - Chi-square -Contingency table for independent of attributes – Goodness of fit. **L:6 T:3**

CO3: analyze the variances in design of experiments **L:6**

One way and two way classifications - Completely randomized design – Randomized block **T:3**

design – Latin square design – 2^2 factorial design.

CO4: find solution of linear equations and to perform differentiation and integrationnumerically

Solution of algebraic and transcendental linear equations - Newton - Raphson Method- Solution of simultaneous equations – Gauss Elimination method – Gauss Seidel method – Interpolation – Lagrange's Method - Numerical Differentiation – Newton's forward difference and backward difference formula – Numerical integration - Single integration using Trapezoidal and Simpson's 1/3 rd and 3/8 th rules. **L:6 T:3**

CO5: compute numerical solution of differential equations

Taylor's Series Method – Euler's Method – Runge Kutta fourth order Method – Predictor - corrector Methods – Milne's Method - Solution of one dimensional heat equation by explicit and implicit methods(Crank Nichelson and Bender Schmidth methods) - Two dimensional Laplace and Poisson equations. **L:6 T:3**

TEXT BOOKS

1. Richard A. Johnson, "Miller and Freund's Probability and Statistics for Engineers", 9thEdition, Pearson Education Private Ltd., 2018.
2. Grewal, B.S., "Numerical Methods in Engineering & Science: With Programs in C, C++ &MATLAB", 11thEdition, Khanna Publishers, New Delhi, 2014.

L : 30; T :15; TOTAL : 45 PERIODS

Course Code	TRANSFORMS, MATHEMATICAL LOGIC AND SET THEORY	L	T	P	E	C
23SH09E		2	1	0	0	3

COURSE OUTCOMES:

Upon successfully completing the course, the students will be able to:

Theory Components:

CO1: apply Laplace transform to solve ordinary differential equations. (CDL 1)
CO2: compute the Fourier transforms of various functions. (CDL 1)
CO3: solve difference equations using Z-Transform. (CDL 1)
CO4: illustrate the validity of the arguments. (CDL 1)
CO5**:**analyze the concepts of Sets, Relations and Functions. (CDL 1)

CO 1 : apply Laplace transform to solve ordinary differential equations

Definition of Laplace transform and its inverse – Transforms of elementary functions – Properties – Transforms of periodic functions – Initial and final value theorems – Convolution theorem.- solutions of linear ordinary differential equations with constant coefficients. **L:6 T:3**

CO2 : compute the Fourier transforms of various functions

Fourier Integral theorem (without proof)–Fourier transform pair–Fourier Sine and Cosine transforms–Properties–Transforms of simple functions–Convolution theorem –Parseval's **L:6 T:3**

theorem.

CO3 : solve difference equations using Z-Transform

Z– transform –Elementary properties – Inverse Z–transform – Convolution theorem- Initial and final value theorem – Formation of difference equations –Solutions of difference equations using Z–transform. **L:6 T:3**

CO4: illustrate the validity of the arguments.

Propositional Logic – Equivalences and Implications – Normal forms – Rules of inference – Proof methods and Strategies - Forward Proof, Proof by Contradiction, Proof by Contraposition, Proof of Necessity and Sufficiency. **L:6 T:3**

CO5: analyze the concepts of Sets, Relations and Functions

Basic Definitions - Set operations – Laws of set theory – Relations – Properties of relations - Equivalence Relation - Matrices of relations - Closure of relations – Functions – Bijective functions - Inverse and Compositions of functions **L:6 T:3**

L : 30; T :15; TOTAL : 45 PERIODS

Course Code		L	T	P	E	C
23SH10E	**FUNDAMENTALS OF LASER TECHNOLOGY**	**3**	**0**	**0**	**0**	**3**

COURSE OUTCOMES:

Upon successfully completing the course , the students will be able to:

CO1: explain the fundamentals of lasers (CDL1)

CO2: demonstrate the laser surface modification process (CDL1)

CO3: describe the laser machining processes (CDL1)

CO4: identify the laser measurement and testing process (CDL1)

CO5: organizethe advanced applications and safety measures of laser (CDL1)

CO1: explain the fundamentals of lasers

Characteristics of laser -laser principle- population inversion-line broadening mechanisms-Q switching - threshold condition for laser-three-level and four-level systems-conditions for continuous wave (CW) and pulsed laser action- pumping schemes-classification of lasers:Er:YAG - carbon dioxide lasers - argon laser - X-Ray lasers - fiber lasers - Raman lasers. **L:9**

CO2: demonstrate the laser surface modification process

Laser surface heat treatment: process parameters - advantages and disadvantages of laser **L:9**

surface treatment; laser surface melting - laser direct metal deposition: processing parameters - methods for applying the coating material- laser alloying and cladding - advantages and disadvantages -laser physical vapor deposition - laser shock peening: analysis - advantages and disadvantages

CO3: describe the laser machining processes

Laser welding parameters: beam power, spot diameter and traverse speed; welding efficiency; mechanism of laser welding: conduction mode welding, keyhole welding; laser cutting – process characteristics-fusion cutting, sublimation cutting, photochemical ablation;laser drilling –single pulse drilling-percussion drilling, trepanning applications - laser marking - dot matrix marking, engraving, image micro machining -lasers for marking - application **L:9**

CO4: identify the laser measurement and testing process

Laser for measurement - distance -length-velocity-acceleration-current-voltage-atmospheric effect-laser application in spatial frequency filtering. **L:9**

Holography: basic principle - methods - Holographic interferometry and applications-holography for non – destructive testing – holographic components

CO5: organizethe advanced applications and safety measures of laser

Laser advanced application in defence-laser weapons- industry for material handling: ASRS and AGV- medicine -laser activated therapy - photodynamic therapy, laser angioplasty, lasers in surgery - photocoagulation, photodisruption and photoablation - laser scanning confocal microscopy - Laser safety - danger - safety limits for eye and skin - class four safety arrangements - electric hazards- chemical hazards - fume hazards - explosion hazards - safety guidelines **L:9**

Course Code		L	T	P	E	C
23SH11E	**NANOMATERIALS FOR ENGINEERS**	**3**	**0**	**0**	**0**	**3**

COURSE OUTCOMES:

Upon successfully completing the course , the students will be able to:

CO1: explain the fundamentals of nanomaterials (CDL1)

CO2: interpret the different properties of nanomaterials (CDL1)

CO3: demonstrate the synthesis of nanomaterials (CDL1)

CO4: illustrate the characterization of nanomaterials (CDL1)

CO5: organize the applications of nanomaterials(CDL1)

CO1: explain the fundamentals of nanomaterials

Introduction to nanomaterials - size effect - specific surface area - surface to volume ratio - quantum confinement effects - morphology - density - melting point - wettability - classification based on the dimension - nanoparticles - nanowires - nanoclusters - nanotubes - quantum wells - metal based nanomaterials - nanocomposites - carbon nanotubes - nanosized metals - alloys - semiconductors - ceramics **L:9**

CO2: interpret the different properties of nanomaterials

Mechanical behavior- comparison of bulk and nano materials - elastic and plastic deformation - tensile strength - superplasticity -hardness - nano hardness -influence of porosity - grain size – thermodynamics of nanoparticles- heat capacity – phase transformation of nanoparticles- electrical and optical properties: electrical conductivity in nano tubes, nano rods and nanocomposites - photoconductivity of nanorods - electroluminiscesnce in nanoparticles- magnetic properties: magnetic hysteresis - superparamagnetism **L:9**

CO3: demonstrate the synthesis of nanomaterials

Bottom-up and top-down approach - inert gas condensation - plasma arc technique - ion sputtering - ball milling - molecular beam epitaxy - chemical vapour deposition - method - electrodeposition - ultrasonication - microemulsions method - solvothermal synthesis - microwave assisted synthesis. **L:9**

CO4: illustrate the characterization of nanomaterials

X-ray diffraction - energy dispersive spectrum - atomic force microscopy - high resolution transmission electron microscopy - Raman spectroscopy - x-ray photoelectron spectroscopy - electrochemcial characterization measurements - cyclic voltammetry - linear sweep voltametry - Brunauer-Emmett-Teller - surface area analysis - nanoindentation - determination of nano hardness. **L:9**

CO5: organize the applications of nanomaterials

Functional graphene - carbon nanotube - polymer composite applications in defence and aerospace - nanomaterials for solar cells - nanoscale catalysts for energy and automobile industries - rechargeable batteries based on nanomaterials - nanomaterials for electrodes and wearable electronics - nano based coating and paints - nanosensors -gas sensors - bio sensors - nano electro mechanical systems **L:9**

Course Code		L	T	P	E	C
23SH12E	**PHOTONICS**	**3**	**0**	**0**	**0**	**3**

COURSE OUTCOMES:

Upon successfully completing the course , the students will be able to:

CO1: explain the basics of photonics (CDL1)

CO2: demonstrate the properties of photonic crystal (CDL1)

CO3: outline the basics of bio photonics (CDL1)

CO4: interpret the quantum confinement in photonic materials(CDL1)

CO5: organize the applications of photonic materials (CDL1)

CO1:explain the basics of photonics

Wave phenomena – interference, diffraction-photon properties - energy, flux, statistics-Interaction of photons with atoms-optical amplification-three and four level system -EDFA-semiconductor light sources-detectors-light manipulation - birefringence - Faraday's rotation - interaction of light with RF and acoustic waves - Raman-Nath diffraction experiment . **L:9**

CO2: demonstrate the properties of photonic crystal

Electromagnetic theory of light-electromagnetic properties of material- polarization of light; Reflection and refraction- Fresnel equations; absorption, dispersion, and scattering of electromagnetic waves -Bragg grating; 1D photonic crystals -photonic band structure-real and reciprocal lattices; 2D and 3D photonic crystals-emerging applications of photonic crystals - 1D Bragg grating - periodic dielectric wave guide - 2D photonic crystal slab and fibre. **L:9**

CO3:outline the basics of bio photonics

Fundamentals of light and matter-basics of light-matter interactions in molecules, cells and tissues -lasers for biophotonics -bioimaging: principles and applications-transmission microscopy, Kohler illumination-optical biosensors-light activated therapy: photo thermal and photo dynamic therapy- tissue engineering with light- optical tweezers, scissors and traps - bio nanophotonics applications - bio chip - DNA micro-arrays - gene chip - lab on chip. **L:9**

CO4:interpret the quantum confinement in photonic materials

Quantum confined materials: quantum wells, quantum wires, quantum dots, quantum rings, manifestations of quantum confinement, optical properties, quantum confined stark effect, dielectric confinement effect. **L:9**

Nanoplasmonics: optical response of metals, plasmons, optical properties of metal nanoparticles, size dependent absorption and scattering, coupled nanoparticles - metal-dielectric core-shell nanoparticles - local electromagnetic fields in metal nanoparticles.

CO5: organize the applications of photonic materials

Excitation energy transfer – device operation: nanophotonic AND gate - nanophotonic OR gate – interconnection with photonic devices - metamaterials concept; super lens, hyperbolic **L:9**

metamaterials and application in high-resolution imaging: hyper lens - tunable photonic metamaterials based devices - electro-optical metamaterials - phase-change metamaterials - metamaterials in solar energy harvesting - perfect absorbers and thermal emitter

L : 45; TOTAL : 45 PERIODS

Course Code		L	T	P	E	C
23SH13E	**BIOLOGY FOR COMPUTING**	3	0	0	0	3

COURSE OUTCOMES:

Upon successful completion of the course the students will be able to

CO1: describe the structure, interaction and applications of biomolecules
CO2: interpret the structure and functions of the gene and protein using the bioinformatics data
CO3: simulate the behavior of simple biological models using computational softwares
CO4: identify and design molecules for new drug development by computational methods

CO1: describe the structure, interaction and applications of biomolecules L:9

Biomolecules-I :

Introduction – monomeric units and polymeric structures of carbohydrates, proteins, nucleic acids and lipids. Enzymes: enzymatic action via Lock and key – Enzyme therapy - immune response monitoring – molecular modification – encapsulation. Agarose gel electrophoresis: SDS, PAGE and 2D – Molecular interactions: covalent and non-covalent interactions, antigen – antibody interactions. Methods to measure the interactions: UV-visible and single crystal X-ray diffraction.

Biomolecules -II L:9

Chromosome structure and function – chromosome abnormalities – chromosome dynamics – nuclear architecture. DNA transcription, replication and segregation. DNA finger printing. Pedigree analysis. Identifying human disease genes (functional cloning versus positional cloning; mutation screening). Human genome project: introduction – steps – salient features. Hap map project – salient features.

CO2: interpret the structure and functions of the gene and protein using the bioinformatics data L:9

Bioinformatics: introduction – biological databases – types. DNA databases – EMBL, gene bank, DDBJ. Protein databases: Swiss Prot/TrEMBL, PIR. Sequence motif databases -

Pfam, PROSITE, Protein structure databases, protein data Bank – SCOP, CATH, and KEGG. Sequence analysis – methods of sequencing: sangar method, maxama - gilbert method and edman degradation method, NGS methods of sequencing. Basic local alignment search tool (BLAST) – types – determining the identity of an organism from its r DNA gene nucleotide sequence. Softwares for handling the databases – ChemDiff.

CO3: simulate the behavior of simple biological models using computational softwares L:9

Quantum mechanics: influence of physics on theoretical chemistry. Semi empirical methods – slater determinants – Hartree – Fock equation. Semi empirical models - Ab-initio calculations: Thermodynamic functions – koopmans's theorem – isodesmic reactions, Density functional theory for larger molecules. Introduction to Gaussian and ADF : Geometry optimization, frequency calculation, location of transition state, intrinsic reaction co-ordinates, molecular orbitals and population analysis, natural bond orbital analysis, calculation of equilibrium constants and rate constants. Introduction to GROMACS: GROMACS input files, simulations of liquid water, water methanol mixtures, S-peptide and free energy of salvation. Introduction to SCILAB- Scilab programming: Curve fitting, integral transforms and introduction to molecular dynamics. Execution of programs for liquid argon.

CO4: identify and design molecules for new drug development by computational methods L:9

Drug design: General approach to discovery of new drugs – lead modification – calculation of the various drug likeness rules like Lipinski's rule, MDDR - like rule, Veber rule, Ghose filter, BBB rule, CMC-50 like rule and Quantitative estimate of drug-likeness (QED) using DruLiTo and Swiss ADMEsoftware. Pharmacokinetic properties of drug using Osiris and Molinspiration software. Structure-based drug designing approaches - target identification and validation - physiochemical principles of drug action – drug stereo chemistry – drug action - 3D database – computer aided drug design. Identification of the suitable target using Pharmmapper - Molecular docking programs using Autovina softwares and visualization tools - Preparation of protein and ligand using ADT and pymol-generation of paper publication-quality images and data analysis-protein-protein docking-Protein DNA docking

3. Robert A. Copeland, Enzymes: A Practical Introduction to Structure, Mechanism, and Data Analysis, 3rdEdition, Wiley-Blackwell, New York, 2023.

L: 45; TOTAL: 45 PERIODS

Course Code		L	T	P	E	C
23SH14E	BIOLOGICAL SYSTEMS FOR ENGINEERS	3	0	0	0	3

COURSE OUTCOMES:

Upon successful completion of the course the students will be able to

CO1: understanding of bio design principles to create novel devices and structures and cell biology

CO2: explain the structure and stability of biomolecules

CO3: describe the principle, components and applications of various instruments for medical diagnosis

CO4: interpret the major bio-energetic pathways

CO5: explain the properties characterization and application of various biomaterials

CO1: understand the basic principles of biology to create novel devices **L:9**

Cell - prokaryotic and eukaryotic cells - plant cell and animal cell - structural and function of Mitochondria - Chloroplast - Lysosomes - Golgi bodies - Nucleus. Cell cycle: mitosis and meiosis. Bioinspired devices: GPS, aircrafts, swim suits, bullet train, super hydrophobic and self-cleaning surfaces.

CO2: explain the structure and stability of biomolecules **L:9**

Introduction - monomeric units and polymeric structures of carbohydrates, proteins, nucleic acids and lipids. Molecular interactions: covalent and non-covalent interactions – methods of quantification and determination: UV – visible, CD, and SPR.

Enzymes - classification - specific activity - enzyme activity - chemical nature of enzymes. Protein and non-protein nature of enzymes. Metalloenzymes and metal activated enzymes. Industrial applications of enzymes: biosensors and bio bleaching.

CO3: describe the principle and applications of various instruments for medical diagnosis **L:9**

Basic concepts of instrumentation: static and dynamic characteristics, design criteria, instrumentation, amplifiers. Biopotential electrodes: fundamentals - body surface electrodes - microelectrodes - Principle, components and applications of microscope: light and electron microscope. Electrocardiograph, glucometer, CT, magnetic resonance imaging, ultrasonic imaging. Artificial Intelligence for disease diagnosis.

CO4: interpret the major bio-energetic pathways **L:9**

Thermodynamics in biological systems - exothermic and endothermic versus endergonic and exergonic reactions - concept of K_{eq} and its relation to standard free energy - spontaneity - ATP as an energy currency. Glucose synthesis from $CO_2 + H_2O$ (photosynthesis) – decomposition of glucose (Glycolysis and Krebs cycle). Energy yielding and energy consuming reactions. Concept of energy charge. Regulation of glycogenesis - measurement of blood glucose level.

CO5: explain the properties, characterization, and applications of various biomaterials. **L:9**

Biomaterials: introduction - types: alloys, polymers. Composites - properties: biocompatibility, elasticity, immune compatibility, resorbability, cytotoxicity, hemocompatibility and biodegradability. Physicochemical characterization: XRD and SEM. Applications: tissue engineering, heart valves, dental and orthopaedic implants.

L: 45; TOTAL: 45 PERIODS

Course Code		L	T	P	E	C
23SH15E	**POLYMER SCIENCE AND TECHNOLOGY**	3	0	0	0	3

COURSE OUTCOMES:

Upon completion of this course, the students will be able to

CO1: acquire knowledge on structure - property relationship of polymers

CO2: identify the suitable polymerization techniques for the large scale synthesis of polymers

CO3: explain the basic principles of various polymer processing techniques and their applications

CO4: interpret the chemical, thermal, electrical, and mechanical properties of the polymers

CO5: familiar with plastics waste disposal, value addition, associated environmental issues and legislation

CO1: acquire knowledge on structure - property relationship of polymers **L: 9**

Basic concepts of polymerization - polydispersity - conformation and configuration of macromolecules - stereo isomerism and tacticity in polymers - geometrical isomerism. Structure - property relationship -molecular force and chemical bonding in polymers - effect of polymerization on PDI. General rules for polymer solubility - crystallinity and orientation in polymers. Polymer chain flexibility: concept - factors deciding polymer flexibility - amorphous and crystalline polymers - crystallinity in polymers - factors affecting crystallinity - properties affected by crystallinity of polymers. Glass transition temperature and crystalline melting points. Factors affecting glass transition temperature.

CO2: identify the suitable polymerization techniques for the large scale synthesis of polymers **L:9**

Basic aspects of polymer synthesis - bulk, solution and suspension polymerization (styrene and MMA) - emulsion polymerization (vinyl acetate, styrene) - preparation of phenolic and epoxy resins. Modern techniques in polymerization: metathesis polymerization - controlled polymerization methods, viz., nitroxide mediated polymerization (NMD), atom transfer radical polymerization (ATRP), group transfer polymerization (GTP), and reversible addition fragmentation termination (RAFT).

CO3: explain the basic principles of various polymer processing techniques and their applications **L:9**

Plastics technology: raw materials - additives for compounding (fillers, plasticizers and softeners, lubricants, promoters, anti-aging additives, flame retarders, colorants, blowing agents, UV stabilizers,) - requirements and functions of additives. Pre-compounding

operations: mixing, drum blenders, ribbon blenders, mixing rolls, internal mixers, mixing extruders, blenders for making organosol and plastisol, granulators, pelletizers.
Advanced fabrication techniques: RTM, RIM, filament winding, BMC/SMC. Post-forming and finishing, machining, welding and design of polymers products. Selections of polymers, additives, mold design. Analysis of defects in moulded products. Processing of reinforced thermoplastics and thermosets: manual processing methods and semi-automatic processing methods. Rubber processing: internal mixer and open mill.

CO4: interpret the chemical, thermal, electrical, and mechanical properties of polymers **L:9**

Physical testing: density, mechanical behaviour, MFI, and water/solvent adsorption. Chemical testing: ignition - pyrolysis - solvent extraction - elemental analysis. Thermal analysis: vicat softening point - dynamic mechanical thermal analysis. Morphological analysis: atomic force microscopy and chemical force microscopy. Spectroscopic analysis: IR peaks assigned for rubber. Study of hydrogenation, halogention, evidence for cyclization and formation of ionomers. Analysis of carbon filled rubber - Case studies.

CO5: familiar with plastics waste disposal, value addition, associated environmental issues and legislation **L-9**

Polymer waste: sources, collection, segregation, and identification by simple techniques. Life cycle assessment, risk factor analysis. Plastics waste management techniques: chemical recycling, thermal conversion technologies, microbial, microwave, and ultrasonic. Use of plastics waste for value addition. Plastics waste management rule - environmental issues.

Course Code		L	T	P	E	C
23SH16E	**SENSORS FOR ENGINEERING APPLICATIONS**	**3**	**0**	**0**	**0**	**3**

COURSE OUTCOMES:

Upon completion of this course, the students will be able to

CO1: Gain knowledge on basic concepts of sensors and Transducer.

CO2: know about the thermal and motion sensors for various applications.

CO3: enumerate the principles and applications of optical and magnetic sensors and transducers used in various field.

CO4: explain the construction, working principle and applications of electrochemical and electric sensors.

CO5: Design the sensors for environmental monitoring

CO1: Gain knowledge on basic concepts of sensors and Transducer. L: 9

Introduction – Historical development of sensors – Human body as a sensor system – sensors and transducers. Principle and classification of sensor. Sensor characteristics – sensor properties – various transducers – piezoelectric effect – pyroelectric effect – seebeck effect and peltier effect. Advantages and limitations of Sensors.

CO2: know about the thermal and motion sensors for various applications. L:9

Thermal sensors: introduction – types - primary sensor: gas thermometer and He low temperature thermometer. Secondary sensor: Resistance thermometer and NQR thermometer. Temperature sensing technologies: IC sensor, resistive temperature detectors, thermocouples and thermistor.

Motion sensors: Introduction and principle. Types: Infra red and microwave. Specialized motion sensor: proximity and ranging sensor. Motion Sensors in everyday life: The role of motion sensors in home security.

CO3: enumerate the principles and applications of optical and magnetic sensors and transducers used in various field L:9

Magnetic sensors: Introduction – principle and applications: magnetic field sensors and magneto-resistive Sensors, hall effect sensors.

Optical sensors: light intensity – wavelength and color – light dependent resistors, photodiode, photo transistor, CCD, CMOS sensors. Pulse oximeter, portable pulse oximeter, wearable pulse oximeter; wearable capnometer for monitoring of expired.

CO4: explain the construction, working principle and applications of electrochemical and electric sensors L-9

Electrochemical sensors: Introduction **-** fundamental concepts – chemiresistors. Conductometric sensor: amperometric sensor **-** potentiometric sensors **-** impendence sensors.

Electric sensors: Introduction- conventional volt and ammeters, high current sensors, (current transformers), high voltage sensors, High power sensors. Real time applications: Glucose Monitoring

Devices, GlucoWatch G2 Biographer, GlucoTrackTM; Pulse oximeter, Portable Pulse Oximeter, wearable pulse oximeter.

CO5: Design the sensors for environmental monitoring L-9

Environmental Sensor: Introduction - environmental quantities**:** time, moisture acidity/alkalinity, wind-chill, radioactive count rate. Surveying and security. Sensors for

environmental monitoring. Smoke and fire detector. Pressure sensor in emission testing, pollution devices, and wind management systems.

TEXT BOOKS

1. Jacob Fraden, Handbook of Modern Sensors: Physics, Design and Applications, 5th edition, Springer Nature, New Delhi, 2016
2. D. Patranabis, Sensors and Transducers, 2nd Edition, PHI Learning Private Limited, New Delhi, 2013.
3. John Veteline, Aravind Raghu, Introduction to sensors, CRC press, New Delhi,2011.
4. S Nihtianov, A. Luque Smart Sensors and MEMS, 2nd Edition, Woodhead Publishing Limited, New Delhi,2018.
5. Edward Sazonov and Michael R. Neuman, Wearable Sensors - Fundamentals, Implementation and Applications, Elsevier publishing company, Amsterdam, Netherland,2014.

REFERENCE BOOKS

1. Shantanu Bhattacharya,A K Agarwal, NripenChanda, Ashok Pandey and Ashis Kumar Sen Environmental, Chemical and Medical Sensors, Springer Verlag, Singapore,2018 .
2. Krzysztof Iniewski, Optical, Acoustic, Magnetic, and Mechanical Sensor Technologies, 1st Edition, CRC Press, New Delhi, 2017.
